How it Works

Louvers are designed such that they will interlock to keep out the water, hot sun and snow. Deep channels in each louver carry water away to the in-built surrounding gutter.

Tilt the louvers like that, the sun is blocked and the fresh air can flush through the opening gaps.

With 90° opening angle, you can still enjoy the sunshine when sunset.

In the event of rain, our pergola is closed to provide complete protection. Water is channeled away directly through the internal drain hidden inside the post.
