

LE MANUEL DU PROPRIÉTAIRE

Pergola 5.6x4 mètres

OTHER LANGUAGES

Veuillez lire ce manuel avant d'utiliser votre pergola pour la première fois.
S'il vous plaît garder ce manuel pour référence future.

Pergola de luxe

Ouverture: Électrique

Taille: 569,6 (Longueur) x409 (Largeur) -cm

Notes d'installation:

1. L'installation nécessite un minimum de trois personnes : une pour la mesure et le marquage, une pour l'installation et une comme assistant.
2. Seules les fixations pour sol en béton sont fournies. Dans le cas où il n'y a pas de dalle béton au sol, il est recommandé de réaliser des dalles béton au niveau de chaque poteau. La dalle en béton doit mesurer au minimum 500x500x500mm.
3. Une fois le cadre de la pergola assemblé, utilisez une équerre, un niveau et une règle pour mesurer le niveau et la diagonale du produit afin de garantir la taille de la pergola. Les bases doivent être exactement de niveau sans aucune tolérance.
4. La pergola doit être boulonnée au sol. Nous n'en prenons pas responsabilité si les carreaux sont fissurés lors du perçage des boulons.
5. Des outils électriques sont nécessaires : assurez-vous qu'ils fonctionnent correctement et suivez les consignes de sécurité.
6. Soyez prudent lorsque vous utilisez des outils tranchants.
7. Portez des vêtements de protection, notamment des lunettes de sécurité, des casques et des gants.
8. Ne grimpez pas et ne vous tenez pas debout sur le toit.

Alerte de sécurité

- Il est fortement recommandé de porter des gants pour le montage.
- N'installez pas de pergola par mauvais temps, comme le vent ou la pluie.
- Ne touchez aucun fil avec des profilés en aluminium.
- Portez toujours des chaussures et des lunettes de protection lors de l'installation d'une pergola.
- Gardez tous les sacs en plastique hors de portée des enfants.
- La colonne de pergola doit être positionnée et fixée sur une surface plane.
- Ne vous appuyez pas sur la colonne pendant la phase de montage.
- Ne laissez pas les enfants s'approcher des lieux pendant la phase de montage.
- Ne vous approchez pas de la pergola en cas de tempête ou de typhon.
- N'essayez pas de grimper sur la pergola sous l'influence de l'alcool ou de drogues.
- Lorsque vous utilisez des échelles ou des outils similaires et des outils électriques pendant la phase d'assemblage, veillez à suivre les recommandations de sécurité du fabricant.
- Tout outil chaud, tel qu'une perceuse électrique, ne peut pas être en contact avec le profilé de la pergola.
- Assurez-vous qu'aucun câble ou autre câble n'est caché sous terre avant de positionner la colonne.

Conseils généraux

- Cette pergola comporte plusieurs composantes et son assemblage prend au moins 90 minutes. La pergola ne doit pas être positionnée sous un arbre.
- Si vous connectez la colonne directement au ciment ou à une base similaire, utilisez les trous pré-perçés sur la base fournie.
- Vérifiez le nombre de profilés et de raccords avant l'assemblage et utilisez-les conformément à la liste des raccords de profilés pour un assemblage facile.
- Mettez les petits morceaux tels que les vis dans un récipient pour éviter toute perte.
- Veuillez faire attention à la position de la transmission sur la poutre pour éviter un mauvais placement.
- Nettoyez régulièrement les feuilles, la neige ou autres objets de la pergola.

Entretien et réparation

- Pour nettoyer la pergola, utilisez un détergent doux et rincez à l'eau. Ne pas utiliser d'acétone ou de produits de nettoyage abrasifs pour nettoyer la surface du profilé en aluminium.

Outils de protection et d'installation

Équipements de protection :

1. Casque
2. Gants
3. Trousse de premiers secours d'urgence
4. Lunettes de protection

Instrument de mesure:

1. Ruban à mesurer (5 mètres ou plus)
2. Règle carrée
3. Niveau

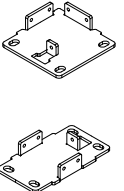

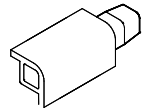

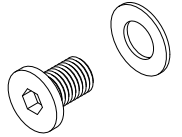

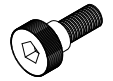

Outils:

1. Échelle de 2 mètres (1,5 mètre ou plus)
2. Clé hexagonale de 13 mm
3. Clé hexagonale de 17 mm
4. Perceuse électrique
5. Foret électrique (foret de 10 mm)
6. Marqueur ou crayon
7. Marteau en caoutchouc
8. Pistolet à mastic et à colle

⑤		x8
⑥		x8

Assembler le cadre

3) Comme indiqué, insérez la poutre et la gouttière (avec support d'arbre) + le moteur (B-1, B-4) dans les messages, puis corrige le B-1 et B-4 sur les poteaux avec des vis hexagonales M8*25⑤ et

Vis hexagonales M8*35⑥.

B-2 B-5	B-3 B-6		x4
⑤		x12	
⑥		x12	

Assembler le cadre

4) Comme indiqué, insérez la poutre et la gouttière (B-2, B-3, B-5, B-6) dans les messages, puis fixez la poutre et la gouttière sur les poteaux avec des vis hexagonales M8*25⑤ et vis hexagonales M8*35⑥.

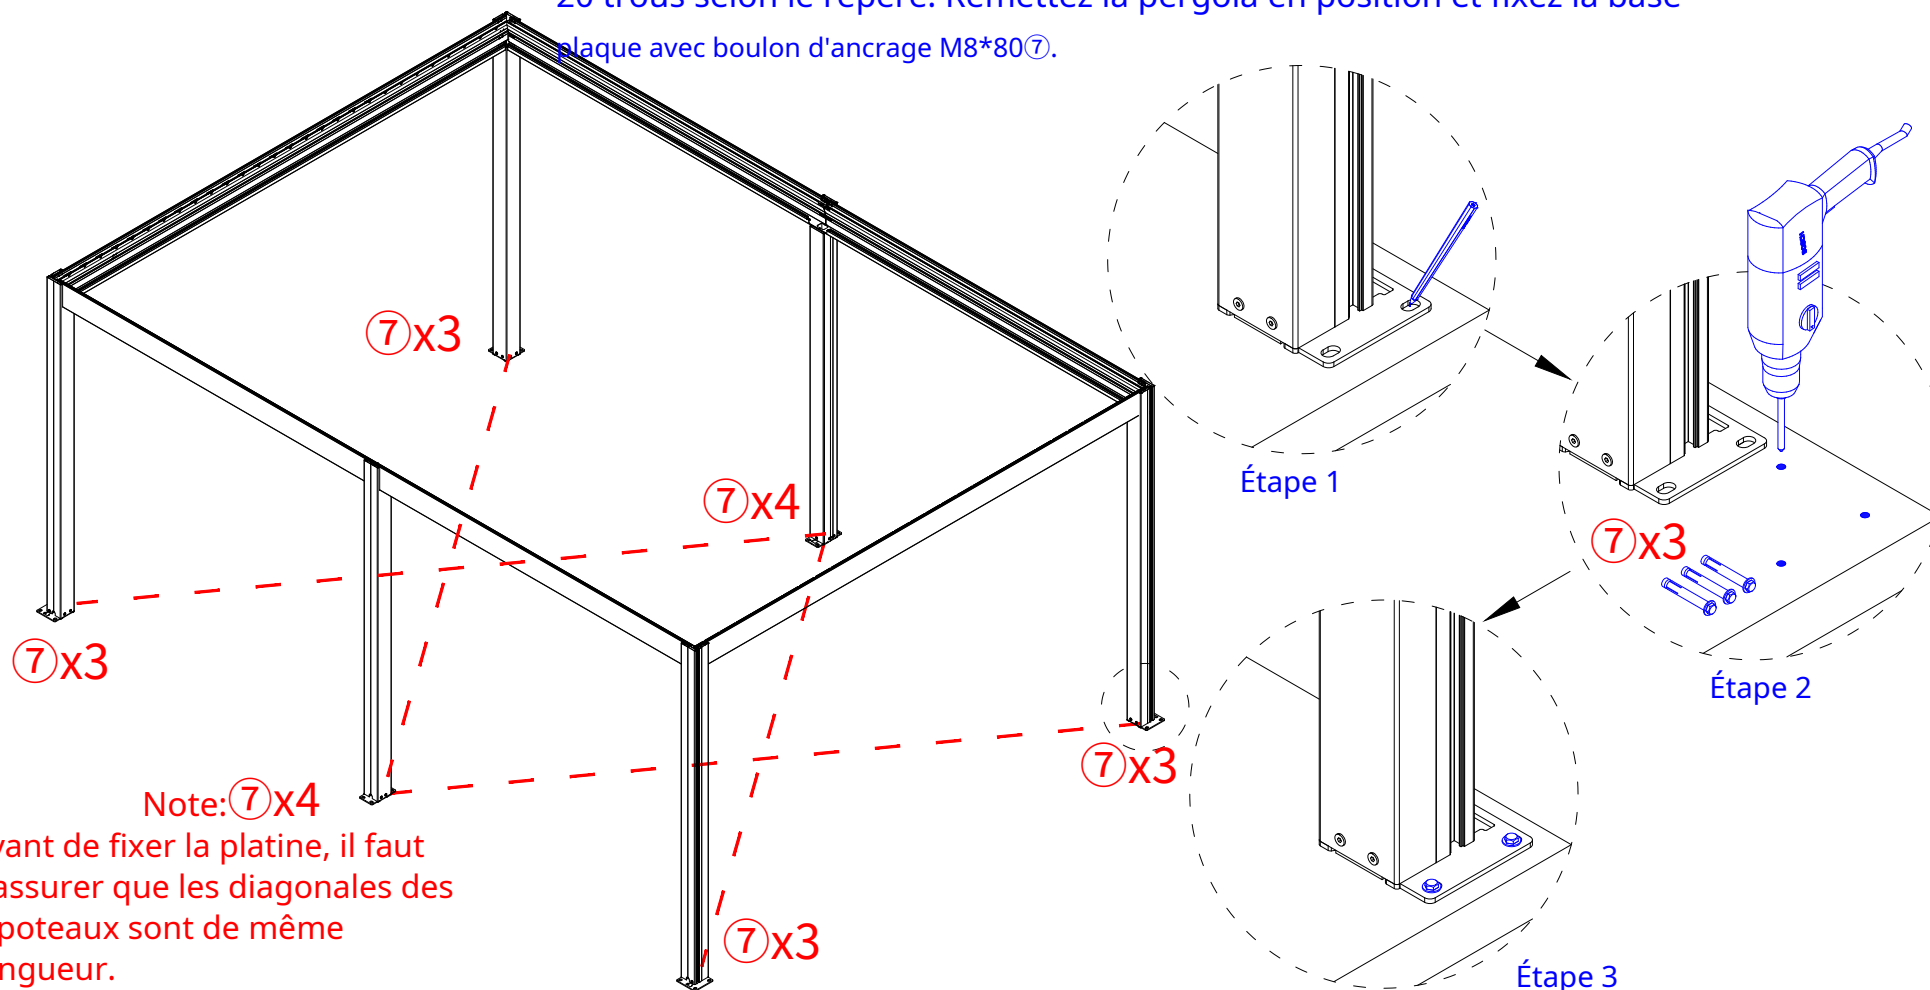

7

x20

Fixer la pergola au sol

- 1) Utilisez le boulon d'ancrage 20 M8*80 ⑦ à condition, si le sol est en béton. Sinon, vous devrez trouver une autre solution pour boulonner votre pergola sur la surface souhaitée.
- 2) Déplacez la pergola dans la position d'installation appropriée, puis marquez la position des quatre poteaux avec le crayon, retirez la pergola et utilisez la perceuse électrique pour faire 20 trous selon le repère. Remettez la pergola en position et fixez la base plaque avec boulon d'ancrage M8*80 ⑦.

Note: ⑦x4

Avant de fixer la platine, il faut s'assurer que les diagonales des 6 poteaux sont de même longueur.

Il est de la responsabilité de l'utilisateur de s'assurer que la pergola est bien fixée. Le fabricant n'est pas responsable des dommages causés par des catastrophes naturelles ou des événements particuliers à la pergola (ou à ses accessoires). Toute pergola non fixée pourra être emportée par le vent et provoquer des dommages, et cette responsabilité ne sera pas imputée au fabricant. Vérifiez régulièrement la pergola pour vous assurer qu'elle reste stable et solidement fixée au sol. Une pergola qui se détache de sa position et subit ou cause des dommages ne sera pas couverte par la garantie.

Pas disponible

Augmentez les performances d'étanchéité de la pergola

1) Le produit de la pergola lui-même est étanche, le fabricant ne fournit donc pas de scellant. Le scellement peut être effectué à la discrétion du propriétaire pour augmenter la durabilité de la pergolas.

Position d'étanchéité : l'intérieur du joint profilé, le joint entre les gouttières (comme illustré).

B-7**x1**

⑧

**x4**

Assembler le cadre

4) Comme indiqué, fixez la poutre et la gouttière B-7 sur le cadre avec
Vis hexagonales M8*20⑧.

Note:

Veillez faire attention au
sens d'installation de la
poutre et de la gouttière B-7.

— Fil d'alimentation

Installation du fil

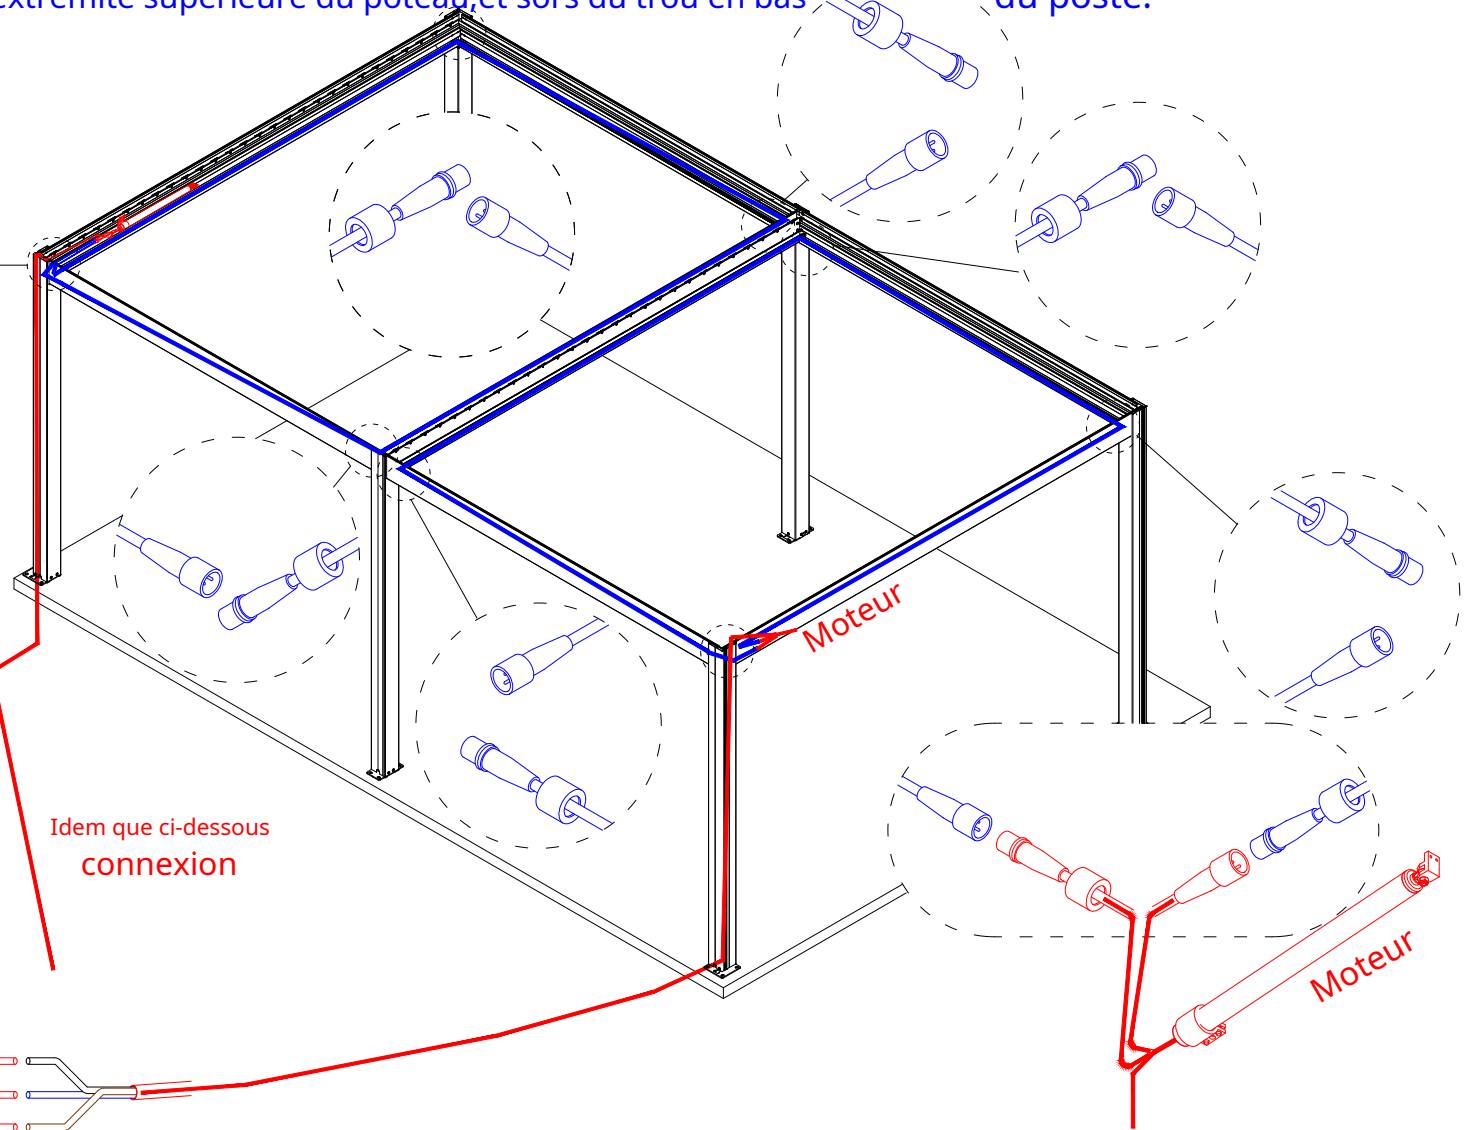

Pour disposer le câble moteur, si le fil doit être caché à l'intérieur du poteau, vous pouvez d'abord tirer le fil vers le bas de la poutre, puis depuis l'espace entre la poutre et le poteau jusqu'à l'extrémité supérieure du poteau, et enfin entrer le poteau à partir de l'encoche située à l'extrémité supérieure du poteau, et sors du trou en bas du poste.

Prise et prise locales 1. Ne pas mettre à proximité de l'eau
2. Prise : 10 A, 110 - 240 V

Idem que ci-dessous connexion

Remarque : veuillez suivre les étapes pour connecter le fil correctement, sinon le moteur sera défectueux.

La prise n'est pas fournie

9

x4

10

x4

Fixer la rallonge d'angle de poteau et de poutre

1) Comme indiqué, veuillez glisser la pièce d'extension du coin du poteau dans la partie supérieure du coin du poteau.

Ensuite, veuillez glisser la pièce d'extension d'angle de poutre sur le côté de le coin de la poutre.

Étape 1

Étape 3

Étape 2

E

x4

Réparer le couvercle de la fente en T

2) Comme illustré, insérez le cache pour fente en T E dans la rainure du poteau.

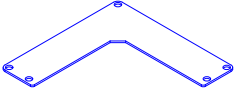

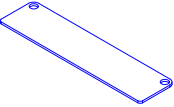

Le bas de ce couvercle à fente en T doit être coupé de 10 mm plus court sur chantier pour ne pas gêner la sortie des câbles.

Étape 1

Étape 2

⑪		x4
⑬		x16
⑭		x8
⑮		x2

Réparer le capot supérieur du poteau

3) Comme indiqué, placez la plaque d'embout en forme de L⑪ sur le dessus du poteau puis fixez-le avec 3 vis autotaraudeuses 4,2*16⑬ et 2 vis à queue de perçage 4,2*19⑭. Correction du capot supérieur du poteau rectangulaire⑮ sur les poteaux avec vis à tête plate 4,2*16⑬.

Installation des lames de persiennes

- 1) Comme illustré, la lame de persienne avec C-1 entraîné s'enclenche directement dans la rainure.
- 2) Connectez le support du bras du moteur au capuchon d'extrémité de la lame de persienne avec les C-1 et C-2 entraînés.

Étape 1

Étape 2

②

x4

②

x2

Installation du couvercle de la plaque de base

1) Comme illustré, l'encoche en forme de U du couvercle de la plaque de base doit être orientée dans la même direction que l'ouverture du drain. Le couvercle de la plaque de base sur poteau avec encoche de sortie supplémentaire.

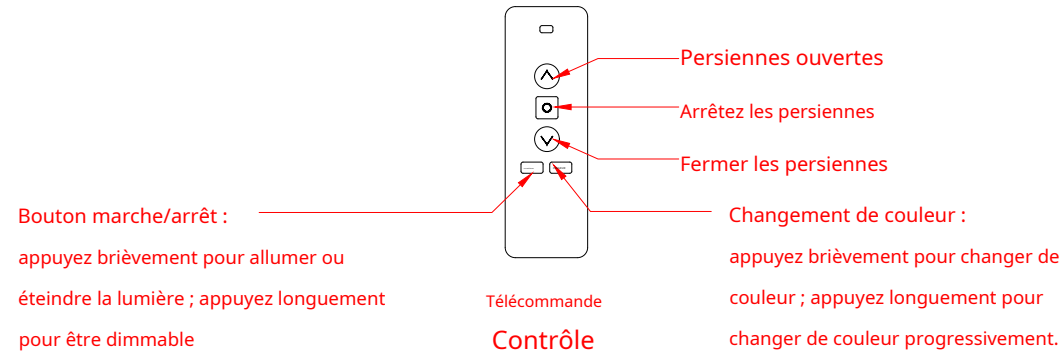

Étape 1

Étape 2

Lorsque la télécommande et le récepteur ne peuvent pas contrôler le moteur, veuillez suivre les étapes ci-dessous pour reprogrammer.

Étapes de couplage :

①

Veuillez éteindre l'alimentation pendant 15 secondes, puis rebrancher l'alimentation, puis s'il vous plaît démarrez les étapes suivantes dans les 30 secondes.

②

Ouvrez le capot arrière de la télécommande/récepteur, appuyez et maintenez enfoncé le bouton **Bouton U2** pendant plus de 7 secondes.

③

Quand le moteur continue de faire un **"bipbipbip"** son.

④

Appuyez et maintenez le **bouton d'arrêt** de la télécommande/récepteur pendant plus de 2 secondes à nouveau. Quand le **"bipbipbip"** Le bruit du moteur disparaît, cela signifie que la télécommande/récepteur a été couplé avec succès.

Étapes qui changent de direction :

Veillez éteindre l'alimentation pendant 15 secondes, puis reconnecter le pouvoir, alors s'il te plaît, démarre le étapes suivantes dans 30 secondes.

Ouvrez le capot arrière de la télécommande/récepteur, appuyez et maintenez enfoncé le bouton **Bouton U2** pendant plus de 7 secondes.

Quand le moteur continue de faire un "bipbipbip" son.

Étapes de suppression du couplage :

Veillez éteindre l'alimentation pendant 15 secondes, puis reconnecter le pouvoir, alors s'il te plaît, démarre le étapes suivantes dans 30 secondes.

Ouvrez le capot arrière de la télécommande/récepteur, appuyez et maintenez enfoncé le bouton **Bouton U2** pendant plus de 7 secondes.

Quand le moteur continue de faire un "bipbipbip" son.

Appuyez et maintenez le bouton haut de la télécommande pendant plus de 2 secondes.

Le moteur fait un "bipbipbip" sonne à nouveau

Appuyez et maintenez le bouton haut de la télécommande/récepteur pour plus de 2 secondes.

Appuyez et maintenez le bouton haut de la télécommande/récepteur pour plus de 2 secondes. Supprimer le jumelage avec succès.

Le moteur fait un "bipbipbip" sonne à nouveau

Appuyez et maintenez le bouton d'arrêt de la télécommande/récepteur pour plus de 2 secondes.

Prendre soin de votre pergola

Les surfaces de structure recouvertes de peintures en poudre thermodurcissables doivent être nettoyées une fois par an pour conserver leur aspect esthétique d'origine.

Les poudres thermodurcissables sont sensibles à :

- Frottement physique, impact violent, extrusion, produits chimiques, notamment solvant alcalin et solvant acide.
- Éléments naturels tels que le vent, la pluie, la neige et la lumière solaire prolongée. L'extérieur de la pergola peut se détériorer avec le temps et cela ne sera pas couvert par la garantie.

Nettoyer votre pergola

- Ne pas utiliser de tampon à récurer, de crème nettoyante, d'éponge abrasive, de bille de fer ou de chiffons colorés.
- Recommandé : Éponge douce, chiffon doux sans sable, coton, coton ou papier non tissé (blanc uniquement).
- N'utilisez pas de produits corrosifs tels que des nettoyants acides ou alcalins. Il est recommandé de le laver avec de l'eau détergente au pH neutre, puis de l'essuyer avec un chiffon pour le garder au sec.
- Lors du nettoyage avec un équipement à haute pression, les mêmes précautions doivent être prises que lors du nettoyage de la carrosserie : il convient de tenir compte de la distance, du type de buse, de la température et de la pression de l'eau.

Utiliser le rappel

- Une fois l'installation terminée, vérifiez que les vis sont bien serrées. N'oubliez pas de vérifier les vis au moins une fois par an.
- **Dans le cas où des chutes de neige, de la grêle ou des vents forts supérieurs à 80 km/h sont prévus, il est recommandé d'ouvrir les lames. N'utilisez pas les lames en cas de gel ou de neige. Merci de retirer les lames de la pergola lorsque la neige est abondante.**
- Vérifiez régulièrement les conditions d'étanchéité pour vous assurer que les joints ou autres composants ne fuient pas.
- Nettoyez régulièrement les débris tels que les feuilles mortes sur la pergola pour éviter le blocage du drain.
- Restrictions d'utilisation : Les systèmes d'étanchéité, bien qu'efficaces, ne sont pas conçus pour assurer une étanchéité complète. Les fortes pluies et les vents violents peuvent endommager la pergola. Tout dommage encouru ne sera pas couvert par la garantie.

UPUTE ZA UPORABU

OTHER LANGUAGES

Pergola 5.6 x 4 m

Prije prve uporabe vaše pergole pročitajte ovaj priručnik.
Molimo sačuvajte ovaj priručnik za buduću upotrebu.

Delux pergola

Otvor: Električni

Veličina: 569.6 (Duljina) x 409 (Širina) -cm

Napomene za instalaciju:

1. Instalacija zahtijeva najmanje tri osobe: jedna za mjerenje i označavanje, jedna za montažu i jedna kao pomoćnik.
2. Isporučuju se samo pričvršćivači za betonski pod. U slučaju da na tlu nema betonske ploče, preporučuje se izrada betonskih ploča na svakom stupu. Betonska ploča treba biti minimalno 500x500x500mm.
3. Nakon što je okvir pergole sastavljen, pomoću kutnika, libele i ravnala izmjerite razinu i dijagonalu proizvoda kako biste osigurali veličinu pergole. Podloge moraju biti točno ravne bez tolerancije.
4. Pergolu je potrebno vijcima pričvrstiti za pod. Ne uzimamo nikakve odgovornost ako pločice napuknu tijekom bušenja vijaka.
5. Potrebni su električni alati: provjerite rade li ispravno i slijedite sigurnosne upute.
6. Budite oprezni kada koristite oštre alate.
7. Nosite zaštitnu odjeću uključujući sigurnosne naočale, kacige i rukavice.
8. Nemojte se penjati ili stajati na krovu.

Sigurnosno upozorenje

- Preporučljivo je nositi rukavice za sastavljanje.
- Ne postavljajte pergolu tijekom loših vremenskih uvjeta, poput vjetra ili kiše.
- Ne dodirujte žice s aluminijskim profilima.
- Prilikom postavljanja pergole uvijek nosite zaštitne cipele i naočale.
- Držite sve plastične vrećice izvan dohvata djece.
- Stup pergole mora biti postavljen i pričvršćen na ravnu površinu.
- Ne naslanjajte se na stup tijekom faze montaže.
- Ne dopustite djeci da prilaze sceni tijekom faze sastavljanja.
- Nemojte se nalaziti u blizini pergole za vrijeme oluje ili tajfuna.
- Ne pokušavajte se penjati na pergolu pod utjecajem alkohola ili droga.
- Kada koristite ljestve ili slične alate i električne alate tijekom faze sastavljanja, svakako slijedite sigurnosne preporuke proizvođača.
- Bilo koji vrući alat, poput električne bušilice, ne smije doći u dodir s profilom pergole.
- Uvjerite se da ispod zemlje nema skrivenih kabela ili drugih kabela prije postavljanja stupa.

Opći savjeti

- Ova pergola ima nekoliko komponenti i potrebno je najmanje 90 minuta za sastavljanje. Pergola se ne smije nalaziti ispod drveta.
- Ako spojite stup izravno na cementnu ili sličnu podlogu, upotrijebite prethodno izbušene rupe na isporučenoj podlozi.
- Prije montaže provjerite broj profila i okova i koristite ih prema popisu okova za profile radi lakše montaže.
- Stavite male komadiće poput vijaka u spremnik kako biste izbjegli gubitak.
- Obratite pozornost na položaj prijenosa na gredi kako biste izbjegli pogrešno postavljanje.
- Redovito čistite lišće, snijeg ili druge predmete s pergole.

Održavanje i popravak

- Za čišćenje pergole koristite blagi deterdžent i isperite vodom. Nemojte koristiti aceton ili abrazivna sredstva za čišćenje za čišćenje površine aluminijskog profila.

Alati za zaštitu i ugradnju

Zaštitna oprema:

1. Kaciga
2. Rukavice
3. Pribor prve pomoći za hitne slučajeve
4. Zaštitne naočale

Instrument za mjerenje:

1. Mjerna traka (5 metara ili više)
2. Kvadratno ravnalo
3. Razina

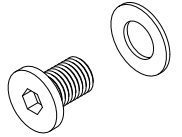

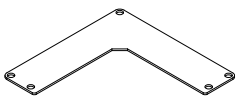

Alati:

1. Ljestve od 2 metra (1,5 metara ili više)
2. Ibus ključ od 13 mm
3. Ibus ključ od 17 mm
4. Električna bušilica
5. Električno svrdlo (10 mm svrdlo)
6. Marker ili olovka
7. Gumeni čekić
8. Pištolj za brtvilo i ljepilo

Nacrt rasporeda aluminijskih profila

1

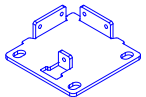

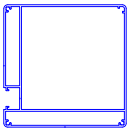

x 1

Ugradnja Drive Louvre Blades

1) Popravio je završnu kapicu za rešetku za spajanje motora ① na spojnoj rešetki motora C-1 s 4,2*20 samoreznim vijkom.

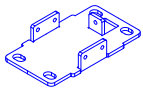

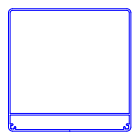

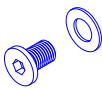

Ako je mjesto postavljanja skučeno, poklopci lopatica mogu se postaviti nakon postavljanja okvira.

③		x 4	A-1 A-2 A-4 A-5		x 4
④		x 20			

Sastavite okvir

1) Kao što je prikazano, poravnajte rupe na osnovnoj ploči③s rupama u stupovima i zaključajte osnovnu ploču③na stupove sa šesterokutnim vijcima M8*12 (s podloškom)④.

③		x 2	A-3 A-6		x 2
④		x 10			

Sastavite okvir

2) Kao što je prikazano, poravnajte rupe na osnovnoj ploči ③ s rupama u stupovima i zaključajte osnovnu ploču ③ na stupove sa šesterokutnim vijcima M8*12 (s podloškom) ④.

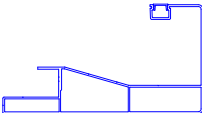

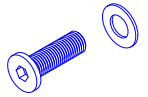

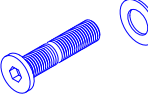

B-1 B-4		x 2
⑤		x 8
⑥		x 8

Sastavite okvir

3) Kao što je prikazano, umetnite gredu i oluk (s držačem osovine) + motor (B-1, B-4) u postove, zatim popravio B-1 i B-4 na stupove sa šesterokutnim vijcima M8*25⑤ i

M8*35 šesterokutni vijci⑥.

B-2 B-5	B-3 B-6		x 4
⑤		x 12	
⑥		x 12	

Sastavite okvir

4) Kao što je prikazano, umetnite gredu i oluk (B-2, B-3, B-5, B-6) u postove, zatim fiksirao gredu i oluk na stupove sa šesterokutnim vijcima M8*25^⑤ i M8*35 šesterokutni vijci^⑥.

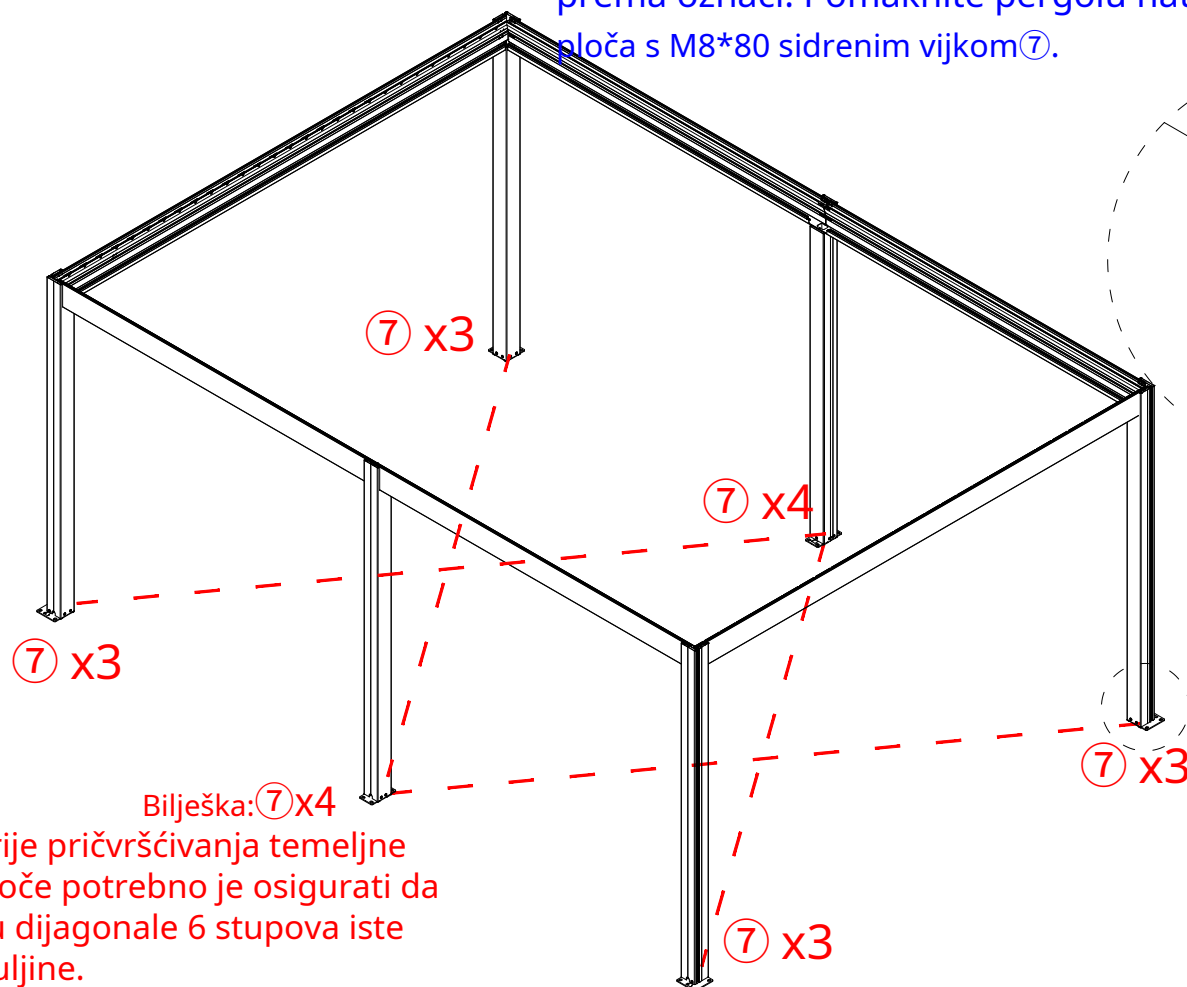

7

x 20

Pričvrstite pergolu za tlo

- 1) Koristite sidreni vijak 20 M8*80 ⑦ ako je tlo betonski pod. Ako ne, morat ćete pronaći drugo rješenje za pričvršćivanje pergole na željenu površinu.
- 2) Pomaknite pergolu u odgovarajući položaj za ugradnju, zatim olovkom označite položaj četiri stupa, uklonite pergolu i pomoću električne bušilice napravite 20 rupa prema oznaci. Pomaknite pergolu natrag u položaj i učvrstite bazu ploča s M8*80 sidrenim vijkom ⑦.

Bilješka: ⑦ x4

Prije pričvršćivanja temeljne ploče potrebno je osigurati da su dijagonale 6 stupova iste duljine.

Korisnik je odgovoran osigurati da je pergola pričvršćena. Proizvođač nije odgovoran za štetu uzrokovanu elementarnim nepogodama ili posebnim događajima na pergoli (ili njezinim dodacima). Svaka pergola koja nije učvršćena može biti otpuhana i prouzročiti štetu, a ova odgovornost neće biti pripisana proizvođaču. Redovito provjeravajte pergolu kako biste bili sigurni da ostaje stabilna i čvrsto pričvršćena za tlo. Pergola koja se odvoji od svog položaja i izazove ili prouzroči štetu neće biti pokrivena jamstvom.

Nije dostupno

Povećajte vodootpornost pergole

1) Sam proizvod pergole je vodootporan, tako da proizvođač ne daje brtvilo. Brtvljenje se može izvršiti po vlastitom nahođenju kako bi se povećala trajnost pergole.

Položaj brtvljenja: unutrašnja strana spoja profila, spoj između oluka (kao što je prikazano).

B-7**x 1****8****x 4****Sastavite okvir**

4) Kao što je prikazano, pričvrstite gredu i olukB-7 na okviru s M8*20 šesterokutni vijci®.

Bilješka:

Obratite pozornost na smjer ugradnje grede i olukaB-7.

Korak 1

Korak 2

— Žica za napajanje

Instaliranje žice

Za postavljanje kabela motora, ako je žicu potrebno sakriti unutar stupa, možete prvo povući žicu do dna grede, zatim od razmaka između grede i stupa do gornjeg kraja stupa, i na kraju unesite stup iz ureza na gornjem kraju stupa, i izaći iz rupe na dnu posta.

Lokalni utikač i utičnica 1. Ne stavljajte u blizinu vode
2. Utikač: 10A, 110 - 240V

Isto kao ispod veza

Napomena: Slijedite korake za ispravno spajanje žice, inače će motor biti neispravan.

Utikač nije isporučen

9

x 4

10

x 4

Učvrstite kutni produžetak stupa i grede

1) Kao što je prikazano, gurnite produžni dio kuta stupa u gornji kut stupa. Zatim gurnite kutni produžetak grede u stranu kut grede.

Korak 1

Ugradnja poklopca osnovne ploče

1) Kao što je prikazano, zarez u obliku slova U na poklopcu osnovne ploče trebao bi biti usmjeren u istom smjeru kao i odvodni otvor. Poklopac osnovne ploče na stupu s dodatnim izrezom za izlaz.

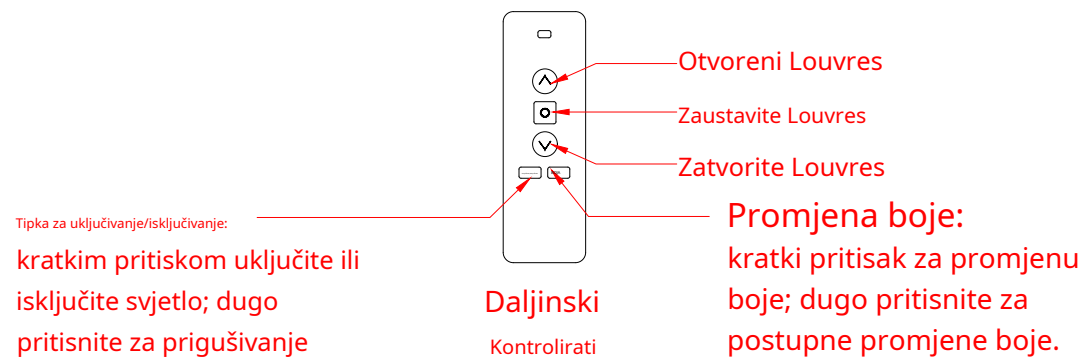

Korak 1

Korak 2

Kada daljinski upravljač i prijemnik ne mogu kontrolirati motor, molimo slijedite korake u nastavku za ponovno programiranje.

Koraci za uparivanje:

1

Isključite napajanje na 15 sekundi, a zatim ga ponovno uključite

pokrenite sljedeće korake unutar 30 sekundi.

2

Otvorite stražnji poklopac daljinskog upravljača/prijemnika, pritisnite i držite **Gumb U2** dulje od 7 sekundi.

3

Kada je motor nastavlja izrađivati a "bipbipbip" zvuk.

4

Pritisnite i držite **gumb za zaustavljanje** daljinskog upravljača/prijemnika ponovno dulje od 2 sekunde. Kada "bipbipbip" zvuk motora nestaje, to znači da je daljinski upravljač/prijemnik uspješno uparen.

Koraci za promjenu smjera:

Isključite napajanje na 15 sekundi i zatim ga ponovno spojite snaga, dakle molim te pokreni slijedeći korake unutar 30 sekundi.

Otvorite stražnji poklopac daljinskog upravljača/prijemnika, pritisnite i držite **Gumb U2** dulje od 7 sekundi.

Kada je motor nastavlja izrađivati a "bipbipbip"zvuk.

Pritisnite i držite **gumb gore** daljinskog upravljača duže od 2 sekunde.

Motor čini a "bipbipbip" ponovno zvuk

Pritisnite i držite **gumb gore** od daljinski/prijemnik za više od 2 sekunde.

Koraci za brisanje uparivanja:

Isključite napajanje na 15 sekundi i zatim ga ponovno spojite snaga, dakle molim te pokreni slijedeći korake unutar 30 sekundi.

Otvorite stražnji poklopac daljinskog upravljača/prijemnika, pritisnite i držite **Gumb U2** dulje od 7 sekundi.

Kada je motor nastavlja izrađivati a "bipbipbip"zvuk.

Pritisnite i držite **gumb gore** daljinskog upravljača/prijemnika za više od 2 sekunde. Izbrišite uparivanje uspješno.

Motor čini a "bipbipbip" ponovno zvuk

Pritisnite i držite **gumb zaustavljanje** daljinskog upravljača/prijemnika za više od 2 sekunde.

Briga za vašu pergolu

Površine konstrukcija obložene termoreaktivnim praškastim premazima moraju se čistiti jednom godišnje kako bi zadržale izvorni estetski izgled.

Termosektirajući prašci osjetljivi su na:

- Fizičko trenje, snažan udar, ekstruzija, kemikalije uključujući alkalna i kisela otapala.
- Prirodni elementi kao što su vjetar, kiša, snijeg i dugotrajna sunčeva svjetlost. Vanjski izgled pergole može se s vremenom pokvariti i to neće biti pokriveno jamstvom.

Čišćenje vaše pergole

- Nemojte koristiti spužvu za ribanje, kremasto sredstvo za čišćenje, abrazivnu spužvu, kuglu od željezne žice ili obojene krpe.
- Preporučeno: meka spužva, meka krpa bez pijeska, vata, pamuk ili netkani papir (samo bijeli).
- Ne koristite korozivne proizvode kao što su kisela ili alkalna sredstva za čišćenje. Preporuča se pranje vodom s neutralnim pH deterdžentom, a zatim obrišite krpom kako bi ostalo suho.
- Pri čišćenju visokotlačnom opremom moraju se poduzeti iste mjere opreza kao i kod čišćenja karoserije automobila: treba uzeti u obzir udaljenost, vrstu mlaznice, temperaturu i tlak vode.

Koristite podsjetnik

- Nakon dovršetka instalacije provjerite jesu li vijci zategnuti. Ne zaboravite provjeriti vijke barem jednom godišnje.
- **U slučaju kada se predviđaju snježne padaline, tuča ili jaki vjetrovi veći od 80 km/h, preporučuje se otvaranje lamela žaluzina. Ne koristite noževe u slučaju mraza ili snijega. Uklonite oštrice s pergole kad ima puno snijega.**
- Redovito provjeravajte uvjete brtvljenja kako biste bili sigurni da brtve ili druge komponente ne cure.
- Redovito čistite ostatke poput otpalog lišća na pergoli kako biste spriječili začepljenje odvoda.
- Ograničenja uporabe: Vodonepropusni sustavi, iako učinkoviti, nisu dizajnirani da osiguraju potpunu vodonepropusnost. Jaka kiša i jaki vjetrovi mogu oštetiti pergolu. Bilo kakva nastala šteta neće biti pokrivena jamstvom.

HASZNÁLATI UTASÍTÁS

OTHER LANGUAGES

Pergola 5.6 x 4 m

Kérjük, olvassa el ezt a kézikönyvet, mielőtt első alkalommal használná a pergolát.

Kérjük, őrizze meg ezt a kézikönyvet későbbi használatra.

Deluxe Pergola

Nyítás: Elektromos

Méret: 569,6 (Hossz) x 409 (Szélesség) -cm

Telepítési megjegyzések:

1. A telepítéshez minimum három ember szükséges: egy a méréshez és jelöléshez, egy a telepítéshez és egy asszisztens.
2. Csak betonpadlórögzítőket biztosítunk. Abban az esetben, ha nincs betonlap a talajon, ajánlatos minden oszlopnál betonlemez készíteni. A betonlap minimum 500x500x500mm méretű legyen.
3. A pergola keret összeszerelése után négyzet, szint és vonalzó segítségével mérje meg a termék szintjét és átlóját, hogy biztosítsa a pergola méretét. Az alapoknak pontosan vízszintesnek kell lenniük, tűrés nélkül.
4. A pergolát a padlóhoz kell csavarozni. Egyiket sem vesszük felelősség, ha a csempe megrepedt a csavarok fúrása során.
5. Elektromos szerszámok szükségesek: ellenőrizze, hogy megfelelően működnek-e, és kövesse a biztonsági utasításokat.
6. Legyen óvatos, amikor éles szerszámokat használ.
7. Viseljen védőruházatot, beleértve a védőszemüveget, sisakot és kesztyűt.
8. Ne mássz fel és ne állj fel a tetőn.

- Az összeszereléshez erősen ajánlott kesztyű viselése.
- Ne telepítse a pergolát rossz időjárási körülmények között, például szél vagy eső esetén.
- Ne érintse meg az alumíniumprofilú vezetékeket.
- A pergola felszerelésekor mindig viseljen védőcipőt és védőszemüveget.
- Minden műanyag zacskót tartson távol a gyermekektől.
- A pergola oszlopot sík felületre kell helyezni és rögzíteni.
- Ne támaszkodjon az oszlopra az összeszerelési szakaszban.
- Ne engedje, hogy gyerekek közeledjenek a helyszínhez az összeszerelési szakaszban.
- Vihar vagy tájfun idején ne tartózkodjon a lugas közelében.
- Ne próbáljon felmászni a lugasra alkohol vagy kábítószer hatása alatt.
- Ha létrát vagy hasonló szerszámokat és elektromos kéziszerszámokat használ az összeszerelés során, feltétlenül tartsa be a gyártó biztonsági ajánlásait.
- Forró szerszámok, például elektromos fűró, nem érintkezhetnek a pergola profillal.
- Az oszlop elhelyezése előtt győződjön meg arról, hogy nincsenek kábelek vagy más kábelek rejtve a föld alatt.

Általános Tanács

- Ez a pergola több elemből áll, és legalább 90 percet vesz igénybe az összeszerelése. A pergolát nem szabad fa alá helyezni.
- Ha az oszlopot közvetlenül cementhez vagy hasonló alaphoz csatlakoztatja, használja a mellékelt alapon lévő előre kilyukasztott lyukakat.
- Összeszerelés előtt ellenőrizze a profilok és szerelvények számát, és a könnyű összeszerelés érdekében használja a profilidomok listája szerint.
- Tegyen kis darabokat, például csavarokat egy edénybe, hogy elkerülje a veszteséget.
- Kérjük, ügyeljen a sebességváltó helyzetére a gerendán, hogy elkerülje a rossz elhelyezést.
- Rendszeresen tisztítsa meg a leveleket, havat és egyéb tárgyakat a pergoláról.

Karbantartás és javítás

- A lugas tisztításához használjon enyhe tisztítószeret, és öblítse le vízzel. Ne használjon acetont vagy súrolószert az alumíniumprofil felületének tisztításához.

Védelmi és telepítési eszközök

Védőfelszerelések:

1. Sisak
2. Kesztyű
3. Sürgősségi elsősegély-készlet
4. Védőszemüveg

Mérőeszköz:

1. Mérőszalag (5 méter vagy több)
2. Négyzet alakú vonalzó
3. Szint

Eszközök:

1. 2 méteres létra (1,5 méter vagy több)
2. 13 mm-es imbuszkulcs
3. 17 mm-es imbuszkulcs
4. Elektromos fűró
5. Elektromos fűrószár (10 mm-es fűrószár)
6. Marker vagy ceruza
7. Gumi kalapács
8. Tömítő- és ragasztópisztoly

7

x 20

Rögzítse a pergolát a talajhoz

- 1) Használja a 20-as M8*80 horgonycsavart 7 feltéve, ha a talaj betonpadló. Ha nem, akkor más megoldást kell találnia a lugas rögzítéséhez a kívánt felületre.
- 2) Helyezze a lugast a megfelelő beépítési helyzetbe, majd ceruzával jelölje be a négy oszlop helyzetét, távolítsa el a pergolát, és az elektromos fúróval készítsen 20 lyukat a jelzésnek megfelelően. Helyezze vissza a pergolát a helyére, és rögzítse az alapot lemez M8*80 horgonycsavarral 7.

Jegyzet: (7) x 4

Az alaplemez rögzítése előtt gondoskodni kell arról, hogy a 6 oszlop átlói egyforma hosszúak legyenek.

A pergola rögzítésének biztosítása a felhasználó felelőssége. A gyártó nem vállal felelősséget a természeti katasztrófák vagy különleges események által a pergolában (vagy tartozékaiban) okozott károkért. A nem rögzített pergola elfújhat és kárt okozhat, és ez a felelősség nem hárul a gyártóra. Rendszeresen ellenőrizze a pergolát, hogy megbizonyosodjon arról, hogy stabil marad és szilárdan rögzítve van a talajhoz. A helyéről leváló és sérülést okozó lugasra nem vonatkozik a garancia.

Nem elérhető

Növelje a pergola vízállóságát

1) Maga a pergola termék vízálló, ezért a gyártó nem biztosít tömítőanyagot. A tömítést a tulajdonos saját belátása szerint végezheti el a pergolák tartósságának növelése érdekében.

Tömítési helyzet: a profilhézag belseje, az ereszcatornák közötti hézag (az ábra szerint).

B-7**x 1****8****x 4**

Szerelje össze a keretet

4) Az ábra szerint rögzítse a gerendát és az ereszcatornát B-7 a kereten -val
M8*20 hatlapfejű csavarok⁸.

Jegyzet:

Kérjük, ügyeljen a gerenda és az ereszcatorna beépítési irányára B-7.

A párosítás lépései:

1

Kérjük, kapcsolja ki a tápfeszültséget 15 másodpercre, majd csatlakoztassa újra a tápellátást, majd kérem 30 másodpercen belül kezdje el a következő lépéseket.

2

Nyissa ki a távirányító/vevőegység hátlapját, nyomja meg és tartsa lenyomva a gombot **U2** gombtöbb mint 7 másodpercig.

3

Amikor a motor folytatja a készítését egy "beep beep beep" hang.

4

Nyomja meg és tartsa lenyomva a gombot **stop** gomb 2 másodpercnél hosszabb ideig ismét lenyomja a távirányítót/vevőt. Amikor az "beep beep beep" a motor hangja eltűnik, ez azt jelenti, hogy a távirányító/vevő sikeresen párosítása megtörtént.

Irányváltó lépések:

Kérjük, kapcsolja ki a készüléket 15 másodpercre, majd csatlakoztassa újra **akkor az erő** kérlek kezd el a belül a következő lépéseket 30 másodperc.

Nyissa ki a távirányító/vevőegység hátlapját, nyomja meg és tartsa lenyomva a gombot **U2 gomb** több mint 7 másodpercig.

Amikor a motor folytatja a készítését egy **"beep beep beep"** hang.

Nyomja meg és tartsa lenyomva a gombot **fel gomb** 2 másodpercnél tovább.

A motor készíti egy **"beep beep beep"** hangzik újra

Nyomja meg és tartsa lenyomva a gombot **fel gomb** több mint 2 másodperc.

A párosítás törlésének lépései:

Kérjük, kapcsolja ki a készüléket 15 másodpercre, majd csatlakoztassa újra **akkor az erő** kérlek kezd el a belül a következő lépéseket 30 másodperc.

Nyissa ki a távirányító/vevőegység hátlapját, nyomja meg és tartsa lenyomva a gombot **U2 gomb** több mint 7 másodpercig.

Amikor a motor folytatja a készítését egy **"beep beep beep"** hang.

Nyomja meg és tartsa lenyomva a gombot **fel gomb** több mint 2 másodperc. Törölje a párosítást sikeresen.

A motor készíti egy **"beep beep beep"** hangzik újra

Nyomja meg és tartsa lenyomva a gombot **stop gomb** több mint 2 másodperc.

Pergolája gondozása

A hőre keményedő porbevonattal bevont szerkezeti felületeket évente egyszer meg kell tisztítani, hogy megőrizzék eredeti esztétikus megjelenésüket.

A hőre keményedő porok érzékenyek:

- Fizikai súrlódás, kemény ütés, extrudálás, vegyszerek, beleértve a lúgos és savas oldószereket.
- Természetes elemek, például szél, eső, hó és hosszan tartó napfény. A lúgas külseje idővel elhasználódhat, és erre nem vonatkozik a garancia.

A pergola tisztítása

- Ne használjon súrolókorongot, krémtisztítót, súrolószivacsot, vashuzalgolyót vagy színes kendőt.
- Javasolt: Puha szivacs, puha, homokmentes kendő, vatta, pamut vagy nem szőtt papír (csak fehér).
- Ne használjon maró hatású termékeket, például savas vagy lúgos tisztítószeret. Javasoljuk, hogy semleges pH-jú mosószeres vízzel mossa le, majd törölje le egy ruhával, hogy száraz maradjon.
- Nagynyomású berendezéssel végzett tisztításkor ugyanazokat az óvintézkedéseket kell betartani, mint a karosszéria tisztítása során: figyelembe kell venni a távolságot, a fúvóka típusát, a víz hőmérsékletét és nyomását.

Használja az Emlékeztetőt

- A telepítés befejezése után ellenőrizze, hogy a csavarok meg vannak-e húzva. Ne felejtse el évente legalább egyszer ellenőrizni a csavarokat.
- **Ha 80 km/h-nál nagyobb havazás, jégeső vagy erős szél várható, ajánlatos kinyitni a lamellákat. Ne működtesse a késeket fagy vagy hó esetén. Kérjük, távolítsa el a pengéket a pergoláról, ha bőséges a hó.**
- Rendszeresen ellenőrizze a tömítési feltételeket, hogy a tömítések vagy más alkatrészek ne szivároгjanak.
- Rendszeresen takarítsa el a törmeléket, például a pergolán lehullott leveleket, hogy megelőzze a lefolyó eltömődését.
- Használati korlátozások: A vízzáró rendszereket, bár hatékonyak, nem úgy tervezték, hogy biztosítsák a teljes vízszigetelést. A heves esőzés és az erős szél károsíthatja a pergolát. Az esetleges károokra a garancia nem vonatkozik.

MANUALE DEL PROPRIETARIO

OTHER LANGUAGES

Pergola 5.6 x 4 mt

Si prega di leggere questo manuale prima di utilizzare la pergola per la prima volta.

Si prega di conservare questo manuale per riferimento futuro.

Pergolato di lusso

Apertura: Elettrico

Misurare: 569.6 (Lunghezza) x 409 (Larghezza) -cm

Note di installazione:

1. L'installazione richiede un minimo di tre persone: una per la misurazione e la marcatura, una per l'installazione e una come assistente.
2. Vengono forniti solo dispositivi di fissaggio per pavimenti in cemento. Nel caso in cui non sia presente una soletta in cemento sul terreno, è consigliabile realizzare delle solette in cemento in corrispondenza di ogni colonna. La soletta di cemento deve avere dimensioni minime di 500x500x500 mm.
3. Dopo aver assemblato il telaio della pergola, utilizzare una squadra, una livella e un righello per misurare il livello e la diagonale del prodotto per garantire le dimensioni della pergola. Le basi devono essere esattamente a livello senza alcuna tolleranza.
4. La pergola deve essere imbullonata al pavimento. Non ne prendiamo nessuna responsabilità in caso di crepe nelle piastrelle durante la foratura dei bulloni.
5. Sono necessari utensili elettrici: assicurarsi che funzionino correttamente e seguire le istruzioni di sicurezza.
6. Fare attenzione quando si utilizzano strumenti affilati.
7. Indossare indumenti protettivi compresi occhiali di sicurezza, elmetti e guanti.
8. Non salire né salire sul tetto.

Avvertenza di sicurezza

- Si consiglia vivamente di indossare guanti per il montaggio.
- Non installare la pergola in condizioni meteorologiche avverse, come vento o pioggia.
- **Non toccare i cavi con i profili in alluminio.**
- Indossare sempre scarpe e occhiali protettivi durante l'installazione della pergola.
- Tenere tutti i sacchetti di plastica fuori dalla portata dei bambini.
- La colonna della pergola deve essere posizionata e fissata su una superficie piana.
- Non appoggiarsi alla colonna durante la fase di montaggio.
- Non permettere ai bambini di avvicinarsi alla scena durante la fase di montaggio.
- Non avvicinarsi alla pergola durante una tempesta o un tifone.
- **Non tentare di salire sulla pergola sotto l'effetto di alcol o droghe.**
- Quando si utilizzano scale o strumenti simili e utensili elettrici durante la fase di montaggio, assicurarsi di seguire le raccomandazioni di sicurezza del produttore.
- Qualsiasi utensile caldo, come un trapano elettrico, non può entrare in contatto con il profilo della pergola.
- Assicurarsi che non vi siano cavi o altri cavi nascosti sottoterra prima di posizionare la colonna.

Consigli generali

- Questa pergola è composta da diversi componenti e il montaggio richiede almeno 90 minuti. La pergola non deve essere posizionata sotto un albero.
- Se si collega la colonna direttamente al cemento o ad una base simile, utilizzare i fori preforati sulla base in dotazione.
- Controllare il numero di profili e raccordi prima del montaggio e utilizzarli secondo l'elenco dei raccordi per profili per un facile montaggio.
- Mettere piccoli pezzi come viti in un contenitore per evitare perdite.
- Prestare attenzione alla posizione della trasmissione sulla trave per evitare smarrimenti.
- Pulite regolarmente foglie, neve o altri oggetti dalla pergola.

Manutenzione e riparazione

- Per pulire la pergola, utilizzare un detergente delicato e risciacquare con acqua. Non utilizzare acetone o prodotti detergenti abrasivi per pulire la superficie del profilo in alluminio.

Strumenti di protezione e installazione

Equipaggiamenti protettivi:

1. Casco
2. Guanti
3. Kit di pronto soccorso di emergenza
4. Occhiali protettivi

Strumento di misura:

1. Metro a nastro (5 metri o più)
2. Righello quadrato
3. Livello

Utensili:

1. Scala da 2 metri (1,5 metri o più)
2. Chiave esagonale da 13 mm
3. Chiave esagonale da 17 mm
4. Trapano elettrico
5. Punta da trapano elettrico (punta da 10 mm)
6. Pennarello o matita
7. Martello di gomma
8. Sigillante e pistola per colla

1

x1

Installazione delle lame del deflettore di azionamento

1) Risolto il problema con il cappuccio terminale del deflettore di collegamento del motore ① sulla feritoia di collegamento del motore C-1 con vite autofilettante 4,2*20.

Se il luogo di installazione è angusto, le coperture delle lame possono essere installate dopo l'installazione della struttura.

③		x4	A-1 A-2 A-4 A-5		x4
④		x20			

Assemblare la struttura

1) Come mostrato, allineare i fori nella piastra di base③ con i fori nei montanti e bloccare la piastra di base③ ai montanti con le viti esagonali M8*12 (con rondella)④.

③		x2	A-3		x2
④		x10	A-6		

Assemblare la struttura

2) Come mostrato, allineare i fori nella piastra di base③ con i fori nei montanti e bloccare la piastra di base③ ai montanti con le viti esagonali M8*12 (con rondella)④.

B-1 B-4		x2
⑤		x8
⑥		x8

Assemblare la struttura

3) Come mostrato, inserire la trave e la grondaia (con il supporto dell'albero) + il motore (B-1, B-4) nei post, poi risolto il B-1 e B-4 sui montanti con viti esagonali M8*25⑤E

Viti esagonali M8*35⑥.

B-2 B-5	B-3 B-6		x4
------------	------------	--	----

⑤		x12
---	---	-----

⑥		x12
---	---	-----

Assemblare la struttura

4) Come mostrato, inserire la trave e la grondaia (B-2, B-3, B-5, B-6) nei post, quindi fissare la trave e la grondaia sui montanti con viti esagonali M8*25⑤ e viti esagonali M8*35⑥.

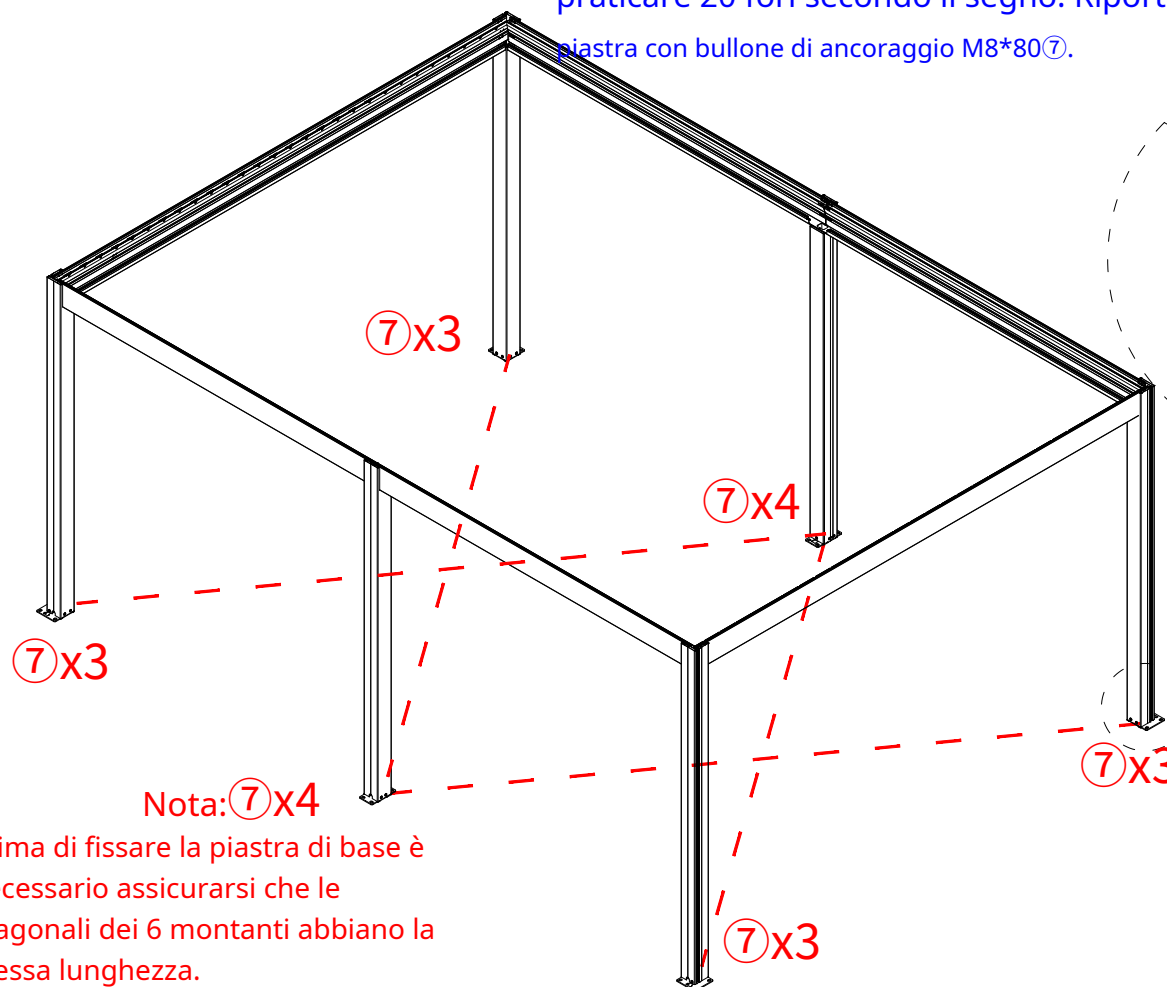

7

x20

Fissare la pergola al terreno

- 1) Utilizzare il bullone di ancoraggio da 20 M8*80 (7) fornito, se il terreno è in cemento. In caso contrario dovrai trovare un'altra soluzione per fissare la pergola sulla superficie desiderata.
- 2) Spostare la pergola nella posizione di installazione appropriata, quindi segnare la posizione dei quattro montanti con la matita, rimuovere la pergola e utilizzare il trapano elettrico per praticare 20 fori secondo il segno. Riportare la pergola in posizione e fissare la base sinistra con bullone di ancoraggio M8*80 (7).

Nota: (7)x4

Prima di fissare la piastra di base è necessario assicurarsi che le diagonali dei 6 montanti abbiano la stessa lunghezza.

È responsabilità dell'utente assicurarsi che la pergola sia fissata. Il produttore non è responsabile per danni causati alla pergola (o ai suoi accessori) da calamità naturali o eventi particolari. Qualsiasi pergola non riparata potrebbe essere spazzata via e causare danni, questa responsabilità non sarà attribuita al produttore. Controllare regolarmente la pergola per assicurarsi che rimanga stabile e saldamente attaccata al terreno. Una pergola che si stacca dalla sua posizione e subisce o provoca danni non sarà coperta da garanzia.

Non disponibile

Aumentare le prestazioni impermeabili della pergola

1) Il prodotto stesso della pergola è impermeabile, quindi il produttore non fornisce sigillante. La sigillatura può essere eseguita a discrezione del proprietario per aumentare la durata della pergola.

Posizione di sigillatura: l'interno del giunto del profilo, il giunto tra le grondaie (come mostrato).

B-7**x1****8****x4**

Assemblare la struttura

4) Come mostrato, fissare la trave e la grondaia B-7 sul quadro con Viti esagonali M8*20⁸.

Nota:

Si prega di prestare attenzione alla direzione di installazione della trave e della grondaia B-7.

Cavo di alimentazione

Installazione del cavo

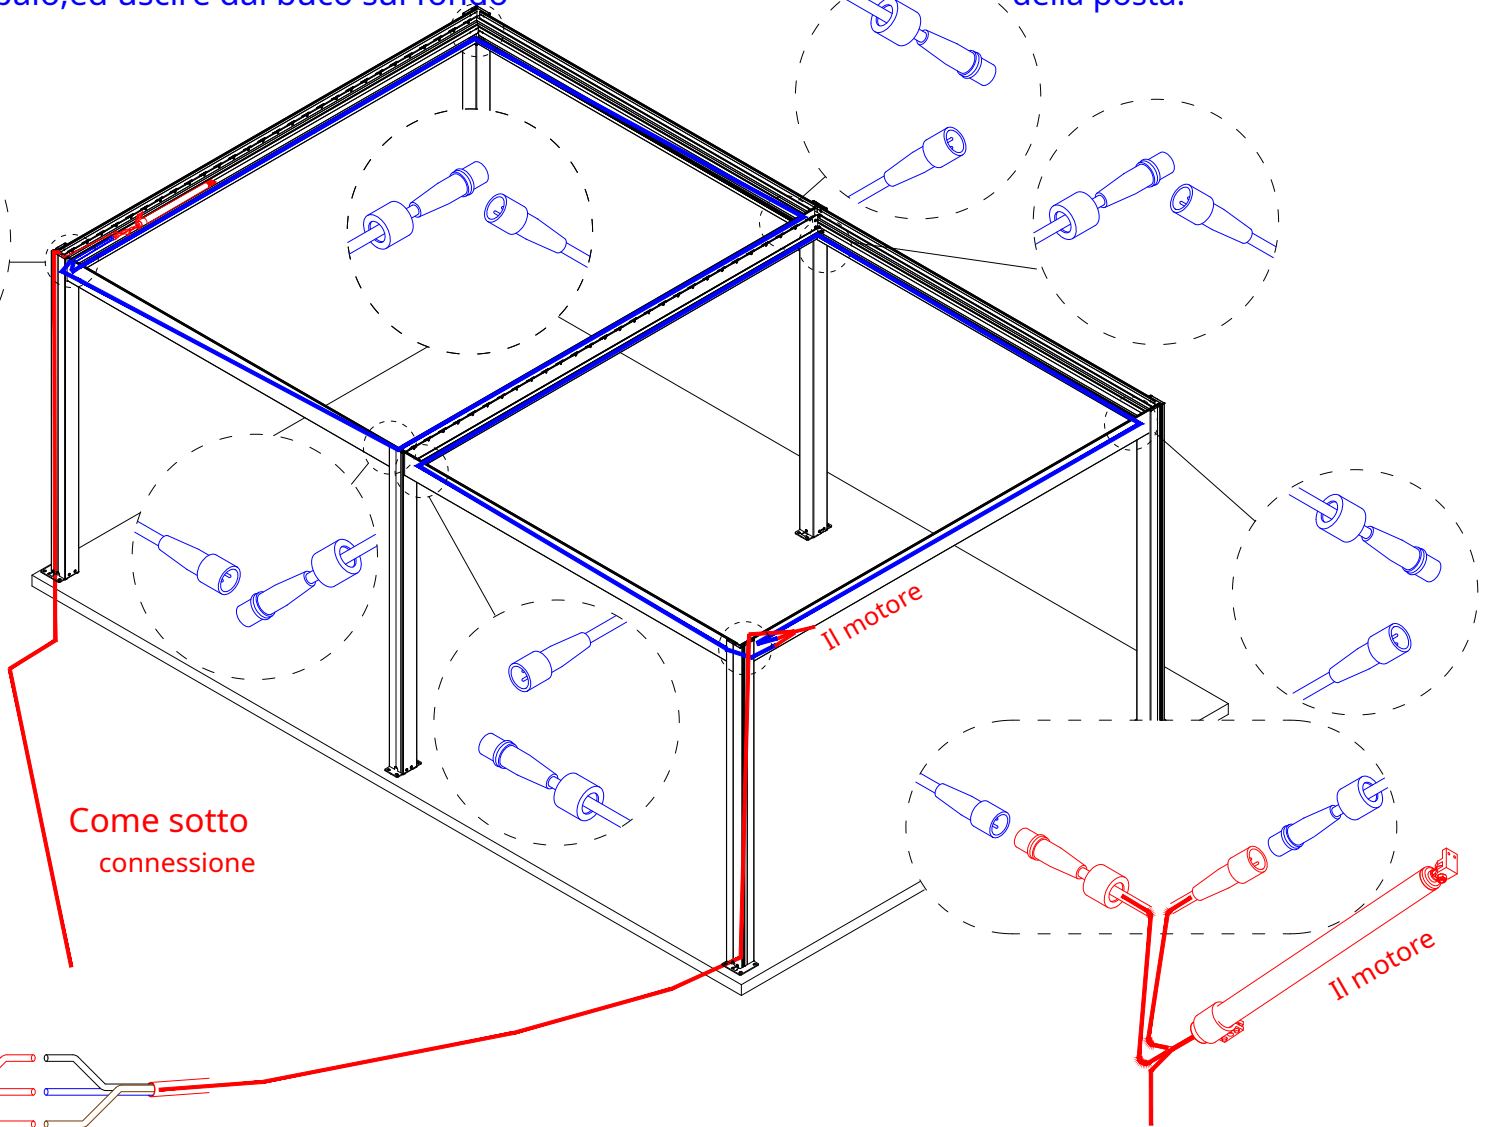

Per disporre il cavo del motore, se il cavo deve essere nascosto all'interno del palo, è possibile prima tirare il cavo fino alla parte inferiore della trave, poi dallo spazio tra la trave e il palo fino all'estremità superiore del palo e infine inserire il palo dalla tacca all'estremità superiore del palo, ed uscire dal buco sul fondo della posta.

Spina e presa locali 1. Non posizionare vicino all'acqua
2. Spina: 10 A, 110 - 240 V

Come sotto
connessione

Nota: seguire i passaggi per collegare correttamente il cavo, altrimenti il motore sarà difettoso.

La spina non è fornita

9		x4
10		x4

Fissare il montante e la prolunga angolare della trave

1) Come mostrato, far scorrere l'elemento di estensione dell'angolo del montante nella parte superiore dell'angolo del montante. Quindi far scorrere l'estensione dell'angolo della trave sul lato l'angolo della trave.

Passo 1

Passo 2

Passaggio 3

E

x4

Correggere la copertura dello slot a T

2) Come mostrato, inserire la copertura della scanalatura a T E nella scanalatura del montante.

La parte inferiore di questa
copertura per slot a T deve
essere tagliato di 10 mm
più corto in
cantiere per evitare
di intralciare l'uscita
dei cavi.

Passo 1

Passo 2

11		x4
13		x16
14		x8
15		x2

Fissare la copertura superiore del palo

3) Come mostrato, posizionare la piastra del cappuccio terminale a forma di L¹¹sulla parte superiore del palo e poi fissarlo con 3 viti autofilettanti da 4,2*16¹³e 2 viti a coda di trapano da 4,2 * 19¹⁴. Risolto il problema con la copertura superiore del montante rettangolare¹⁵sui montanti con vite a testa piatta 4,2*16¹³.

Stringere

Installazione delle lame del Louvre

- 1) Come mostrato, la lama della feritoia con C-1 guidato scatta direttamente nella scanalatura.
- 2) Collegare la staffa del braccio del motore al cappuccio terminale della lama della feritoia con C-1 e C-2 azionati.

9esimo solco

C-4		x27	15		x56
			16		x112

Installazione delle lame del Louvre

5) Come mostrato, la lama della feritoia C-4 scatta direttamente nel scanalatura, fissata la ghiandola del supporto dell'albero 15 accessosupporto dell'albero con Viti a testa svasata M5*16 16.

Nota:

Ogni volta che viene installata una lama della feritoia, il supporto dell'albero ghiandola 15 ad entrambe le estremità della lama della feritoia sono fissate.

Passo 1

Passaggio 3

Passo 2

D**x2**

Installazione delle lame del Louvre

6) Come mostrato, utilizzare la vite con testa incollata M5*8 serrata a mano **17** attraverso il foro (sull'asta di comando D), quindi fissato sulla lama della feritoia.

17**x56**

Passo 1

Passo 2

②

x4

②

x2

Installazione della copertura della piastra di base

1) Come mostrato, la tacca a forma di U del coperchio della piastra di base deve essere orientata nella stessa direzione dell'apertura di scarico. Il coperchio della piastra di base sul montante con tacca di uscita extra.

Passo 1

Passo 2

Quando il telecomando e il ricevitore non riescono a controllare il motore, seguire i passaggi seguenti per riprogrammare.

Passaggi per l'accoppiamento:

①

Spegnere l'alimentazione per 15 secondi, quindi ricollegarla, quindi per favore avviare i passaggi successivi entro 30 secondi.

②

Aprire il coperchio posteriore del telecomando/ricevitore, tenere premuto il tasto **Tasto U2** per più di 7 secondi.

③

Quando il motore continua a fare UN "bipbipbip" suono.

④

Tieni premuto il tasto **pulsante di arresto** del telecomando/ricevitore per più di 2 secondi. Quando il "bipbipbip" il suono del motore scompare, significa che il telecomando/ricevitore è stato accoppiato con successo.

Passaggi di cambio di direzione:

Spegnere l'alimentazione per 15 secondi e quindi ricollegarla il potere, quindi per favore avvia il seguenti passaggi all'interno 30 secondi.

Aprire il coperchio posteriore del telecomando/ricevitore, tenere premuto il **Tasto U2** per più di 7 secondi.

Quando il motore continua a fare UN "bipbipbip" suono.

Tieni premuto il **tasto pulsante sud** del telecomando per più di 2 secondi.

Il motore fa UN "bipbipbip" suona di nuovo

Tieni premuto il **tasto pulsante sud** del telecomando/ricevitore per più di 2 secondi.

Passaggi per l'eliminazione dell'associazione:

Spegnere l'alimentazione per 15 secondi e quindi ricollegarla il potere, quindi per favore avvia il seguenti passaggi all'interno 30 secondi.

Aprire il coperchio posteriore del telecomando/ricevitore, tenere premuto il **Tasto U2** per più di 7 secondi.

Quando il motore continua a fare UN "bipbipbip" suono.

Tieni premuto il **tasto pulsante sud** del telecomando/ricevitore per più di 2 secondi. Elimina l'abbinamento con successo.

Il motore fa UN "bipbipbip" suona di nuovo

Tieni premuto il **tasto pulsante di arresto** del telecomando/ricevitore per più di 2 secondi.

Prenditi cura della tua pergola

Le superfici della struttura rivestite con vernici a polveri termoindurenti devono essere pulite una volta all'anno per mantenere l'aspetto estetico originale.

Le polveri termoindurenti sono sensibili a:

- Attrito fisico, impatto violento, estrusione, sostanze chimiche inclusi solventi alcalini e solventi acidi.
- Elementi naturali come vento, pioggia, neve e luce solare prolungata. L'esterno della pergola potrebbe deteriorarsi nel tempo e questo non sarà coperto dalla garanzia.

Pulire la Pergola

- Non utilizzare spugnette abrasive, creme detergenti, spugne abrasive, sfere di filo di ferro o panni colorati.
- Consigliato: spugna morbida, panno morbido senza sabbia, cotone idrofilo, cotone o carta non tessuta (solo bianca).
- Non utilizzare prodotti corrosivi come detergenti acidi o alcalini. Si consiglia di lavare con acqua detergente a pH neutro e poi asciugarlo con un panno per mantenerlo asciutto.
- Quando si pulisce con un'attrezzatura ad alta pressione, è necessario adottare le stesse precauzioni della pulizia della carrozzeria dell'auto: è necessario considerare la distanza, il tipo di ugello, la temperatura e la pressione dell'acqua.

Usa promemoria

- Al termine dell'installazione, verificare che le viti siano serrate. Ricordarsi di controllare le viti almeno una volta all'anno.
- **Nel caso in cui siano previste nevicite, grandine o forti venti superiori a 80 km/h, si consiglia di aprire le lamelle della feritoia. Non azionare le lame in caso di gelo o neve. Si prega di togliere le lame dalla pergola quando la neve è abbondante.**
- Controllare regolarmente le condizioni di tenuta per garantire che le guarnizioni o altri componenti non perdano.
- Pulire regolarmente i detriti come le foglie cadute sulla pergola per evitare il blocco dello scarico.
- Restrizioni d'uso: I sistemi a tenuta stagna, pur essendo efficaci, non sono progettati per garantire la completa impermeabilità. Forti piogge e forti venti possono danneggiare la pergola. Eventuali danni subiti non saranno coperti dalla garanzia.

GEBRUIKERSHANDLEIDING

OTHER LANGUAGES

Pergola 5.6 x 4 meter

Lees deze handleiding voordat u uw pergola voor de eerste keer gebruikt.
Bewaar deze handleiding voor toekomstig gebruik.

Luxe pergola

Opening: Elektrisch

Maat: 569,6(Lengte) x 409(Breedte) -cm

Gebruikshandleiding:

1. Voor de installatie zijn minimaal drie personen nodig: één voor het meten en markeren, één voor de installatie en één als assistent.
2. Er worden alleen betonvloerbevestigingen meegeleverd. In het geval dat er geen betonplaat op de grond ligt, wordt aanbevolen om bij elke kolom betonplaten te maken. De betonplaat moet minimaal 500x500x500mm zijn.
3. Nadat het pergolaframe is gemonteerd, gebruikt u een vierkant, waterpas en liniaal om het product waterpas en diagonaal te meten om de grootte van de pergola te garanderen. De basis moet precies waterpas zijn, zonder tolerantie.
4. De pergola moet aan de vloer worden vastgeschroefd. Wij nemen er geen verantwoordelijkheid als tegels barsten tijdens het boren van de bouten.
5. Elektrisch gereedschap is vereist: zorg ervoor dat het goed werkt en volg de veiligheidsinstructies.
6. Wees voorzichtig bij het gebruik van scherp gereedschap.
7. Draag beschermende kleding, inclusief een veiligheidsbril, helm en handschoenen.
8. Klim of sta niet op het dak.

Veiligheidswaarschuwing

- Het wordt ten zeerste aanbevolen om tijdens de montage handschoenen te dragen.
- Installeer een pergola niet tijdens slechte weersomstandigheden, zoals wind of regen.
- Raak geen draden aan met aluminium profielen.
- Draag altijd beschermende schoenen en een bril wanneer u een pergola installeert.
- Houd alle plastic zakken buiten het bereik van kinderen.
- De pergolakolom moet op een vlakke ondergrond worden geplaatst en bevestigd.
- Leun niet op de kolom tijdens de montagefase.
- Laat kinderen tijdens de montagefase niet ter plaatse komen.
- Blijf niet in de buurt van de pergola tijdens een storm of tyfoon.
- Probeer niet pergola te beklimmen onder invloed van alcohol of drugs.
- Wanneer u tijdens de montagefase ladders of soortgelijk gereedschap en elektrisch gereedschap gebruikt, dient u de veiligheidsaanbevelingen van de fabrikant op te volgen.
- Heet gereedschap, zoals een boormachine, mag niet in contact komen met het pergolaprofiel.
- Zorg ervoor dat er geen kabels of andere kabels ondergronds verborgen zitten voordat u de kolom plaatst.

Algemeen advies

- Deze pergola bestaat uit verschillende onderdelen en de montage duurt minimaal 90 minuten. De pergola mag niet onder een boom worden geplaatst.
- Als u de kolom rechtstreeks op cement of een soortgelijke basis aansluit, gebruik dan de voorgeboorde gaten op de meegeleverde basis.
- Controleer vóór montage het aantal profielen en hulpstukken en gebruik ze volgens de lijst met profielbeslag voor een eenvoudige montage.
- Doe kleine stukjes zoals schroeven in een bakje om verlies te voorkomen.
- Let op de positie van de transmissie op de straal om verkeerde plaatsing te voorkomen.
- Verwijder regelmatig bladeren, sneeuw of andere voorwerpen van de pergola.

Onderhoud en reparatie

- Gebruik voor het reinigen van de pergola een mild schoonmaakmiddel en spoel af met water. Gebruik geen aceton of schurende schoonmaakmiddelen om het oppervlak van het aluminium profiel schoon te maken.

Beschermings- en installatiehulpmiddelen

Beschermende uitrusting:

1. Helm
2. Handschoenen
3. EHBO-does
4. Veiligheidsbril

Meetinstrument:

1. Meetlint (5 meter of meer)
2. Vierkante liniaal
3. Niveau

Hulpmiddelen:

1. Ladder van 2 meter (1,5 meter of meer)
2. 13 mm inbussleutel
3. 17 mm inbussleutel
4. Elektrische boormachine
5. Elektrische boor (10 mm boor)
6. Marker of potlood
7. Rubberen hamer
8. Afdichtmiddel en lijmpistool

x 1

Lamellen van aandrijving installeren

1) Bevestig de eindkap voor het motorverbindingsrooster ① op de motor die Louvre C-1 verbindt met 4,2*20 zelftappende schroef.

Als de installatieplaats krap is, kunnen de mesafdekkingen worden geïnstalleerd nadat het frame is geïnstalleerd.

③		x 4	A-1 A-2 A-4 A-5		x 4
④		x 20			

Monteer het raamwerk

1) Lijn de gaten in de basisplaat ③ met de gaten in de palen en vergrendel de basisplaat ③ aan de palen met de M8 * 12 zeskantschroeven (met sluitring) ④.

③		x 2	A-3 A-6		x 2
④		x 10			

Monteer het raamwerk

2) Lijn de gaten in de basisplaat uit, zoals afgebeeld ③ met de gaten in de palen en vergrendel de basisplaat ③ aan de palen met de M8 * 12 zeskantschroeven (met sluitring) ④.

B-1 B-4		x 2
⑤		x 8
⑥		x 8

Monteer het raamwerk

3) Plaats zoals afgebeeld de balk en goot (met ashouder) + motor (B-1, B-4) in de posten, repareerde vervolgens de B-1 en B-4 op de palen met M8*25 zeskantschroeven⑤ En

M8*35 zeskantschroeven⑥.

7

x 20

Bevestig de pergola aan de grond

- 1) Gebruik de 20 M8*80 ankerbout ⑦ mits de grond een betonnen vloer is. Als dit niet het geval is, moet u een andere oplossing vinden om uw pergola op het gewenste oppervlak te bevestigen.
- 2) Verplaats de pergola naar de juiste installatiepositie, markeer vervolgens de positie van de vier palen met het potlood, verwijder de pergola en gebruik de elektrische boormachine om 20 gaten te maken volgens de markering. Verplaats de pergola terug naar de positie en zet de basis vast plaat met M8*80 ankerbout ⑦.

Opmerking: ⑦x4

Voordat u de basisplaat bevestigt, moet u ervoor zorgen dat de diagonalen van de 6 palen dezelfde lengte hebben.

Het is de verantwoordelijkheid van de gebruiker om ervoor te zorgen dat de pergola vastgezet wordt. De fabrikant is niet verantwoordelijk voor schade veroorzaakt door natuurrampen of speciale gebeurtenissen aan de pergola (of de accessoires ervan). Elke pergola die niet is bevestigd, kan weggwaaien en schade veroorzaken. Deze verantwoordelijkheid kan niet aan de fabrikant worden toegeschreven. Controleer de pergola regelmatig om er zeker van te zijn dat deze stabiel en stevig op de grond staat. Een pergola die losraakt van zijn plaats en schade oploopt of veroorzaakt, valt niet onder de garantie.

Niet beschikbaar

Verhoog de waterdichte prestaties van Pergola

1) Het pergolaproduct zelf is waterdicht, dus de fabrikant levert geen afdichtmiddel.

Afdichting kan naar goeddunken van de eigenaar worden gedaan om de duurzaamheid van de pergola's te vergroten.

Afdichtingspositie: de binnenkant van de profielvoeg, de voeg tussen de goten (zoals afgebeeld).

B-7

x 1

8

x 4

Monteer het raamwerk

4) Bevestig de balk en goot zoals afgebeeld B-7 op het raamwerk met M8*20 zeskantenschroeven 8.

Opmerking:

Let op de installatierichting van de balk en goot B-7.

Stap 1

Stap 2

— Stroomdraad

Draad installeren

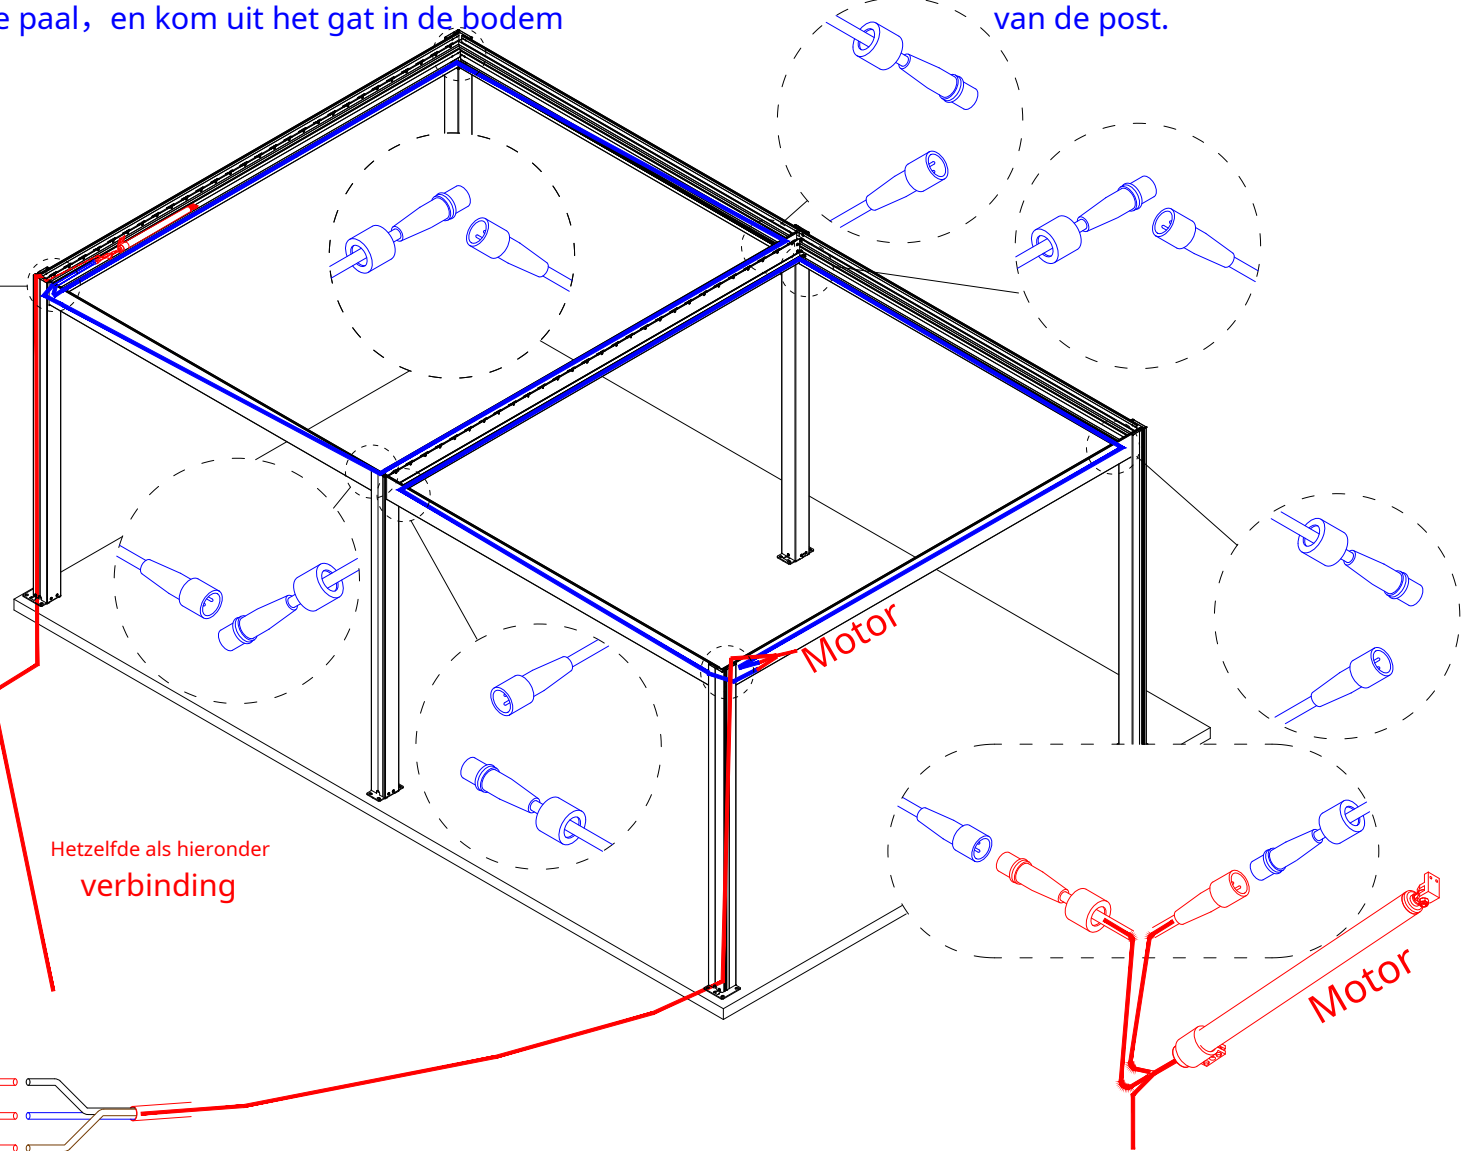

Om de motorkabel te leggen, als de draad verborgen moet worden in de paal, kunt u de draad eerst naar de onderkant van de balk trekken, dan vanuit de opening tussen de balk en de paal naar het bovenste uiteinde van de paal, en ten slotte ga de paal binnen via de inkeping aan de bovenkant van de paal, en kom uit het gat in de bodem van de post.

Lokale stekker en stopcontact 1. Niet in de buurt van water plaatsen
2. Stekker: 10A, 110 - 240V

Hetzelfde als hieronder verbinding

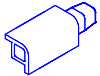

Opmerking: Volg de stappen om de draad correct aan te sluiten, anders zal de motor defect zijn.

De stekker wordt niet meegeleverd

9		x 4
10		x 4

Bevestig het paal- en balkhoekverlengstuk

1) Schuif, zoals weergegeven, het verlengstuk van de paalhoek in de bovenkant van de paalhoek.
Schuif vervolgens het hoekverlengstuk van de balk in de zijkant de balkhoek.

Stap 1

Stap 2

Stap 3

E**x 4**

Bevestig de T-sleufafdekking

2) Steek zoals afgebeeld de T-sleufafdekking E in de groef van de paal.

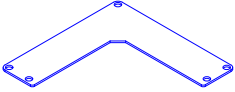

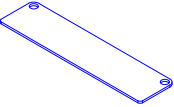

De onderkant van deze
T-Slot Cover moet
10 mm afsnijden
korter ter plaatse om
te voorkomen dat de
kabels naar buiten
komen.

Stap 1

Stap 2

11		x 4
13		x 16
14		x 8
15		x 2

Bevestig de paalbovenafdekking

3) Plaats de L-vormige eindkapplaat zoals afgebeeld 11 op de bovenkant van de paal en bevestig deze vervolgens met 3 van 4,2*16 zelftappende schroeven 13 en 2 van 4,2*19 boorstaartschroeven 14. De bovenafdekking van de rechthoekige paal gerepareerd 15 op de palen met 4,2*16 platte kopschroef 13.

Draai vast

C-1
C-2 x 2

Louvrebladen installeren

- 1) Zoals afgebeeld klikt het lamelblad met aangedreven C-1 direct in de groef.
- 2) Sluit de motorarmbeugel aan op de eindkap van het lamelblad met aangedreven C-1 & C-2.

②

x 2

De bodemplaatafdekking installeren

1) Zoals afgebeeld moet de U-vormige inkeping van de bodemplaatafdekking in dezelfde richting wijzen als de afvoeropening. De bodemplaatafdekking op paal met extra afvoeruitsparing.

Stap 1

Stap 2

Wanneer de afstandsbediening en ontvanger de motor niet kunnen besturen, volgt u de onderstaande stappen om opnieuw te programmeren.

Stappen voor koppelen:

Schakel de stroom gedurende 15 seconden uit en sluit de stroom vervolgens weer aan voer binnen 30 seconden de volgende stappen uit.

Open de achterklep van de afstandsbediening/ontvanger, houd de knop ingedrukt **U2-knop** langer dan 7 seconden.

Wanneer de motor blijft maken A "pieppieppiep" geluid.

Houd de knop ingedrukt **stop knop** van de afstandsbediening/ontvanger opnieuw langer dan 2 seconden ingedrukt. Wanneer de "pieppieppiep" Het geluid van de motor verdwijnt, dit betekent dat de afstandsbediening/ontvanger succesvol is gekoppeld.

Richtingsveranderende stappen:

Schakel de stroom gedurende 15 seconden uit en sluit vervolgens opnieuw aan **de macht dus** begin alsjeblift met de volgende stappen binnen 30 seconden.

Open de achterklep van de afstandsbediening/ontvanger, houd de knop ingedrukt **U2-knop** langer dan 7 seconden.

Wanneer de motor blijft maken A "pieppieppiep" geluid.

Houd de knop ingedrukt **knop omhoog** van de afstandsbediening gedurende meer dan 2 seconden.

De motor maakt A "pieppieppiep" klinkt weer

Houd de knop ingedrukt **knop omhoog** van de afstandsbediening/ontvanger voor langer dan 2 seconden.

Koppelingsverwijderingsstappen:

Schakel de stroom gedurende 15 seconden uit en sluit vervolgens opnieuw aan **de macht dus** begin alsjeblift met de volgende stappen binnen 30 seconden.

Open de achterklep van de afstandsbediening/ontvanger, houd de knop ingedrukt **U2-knop** langer dan 7 seconden.

Wanneer de motor blijft maken A "pieppieppiep" geluid.

Houd de knop ingedrukt **knop omhoog** van de afstandsbediening/ontvanger voor langer dan 2 seconden. Verwijder de koppeling met succes.

De motor maakt A "pieppieppiep" klinkt weer

Houd de knop ingedrukt **stop knop** van de afstandsbediening/ontvanger voor langer dan 2 seconden.

Zorg voor uw pergola

Structuuroppervlakken bedekt met thermohardende poedercoatings moeten eenmaal per jaar worden gereinigd om hun oorspronkelijke esthetische uiterlijk te behouden.

Thermohardende poeders zijn gevoelig voor:

- Fysieke wrijving, harde schokken, extrusie, chemicaliën, waaronder alkalisch oplosmiddel en zuur oplosmiddel.
- Natuurlijke elementen zoals wind, regen, sneeuw en langdurig zonlicht. De buitenkant van de pergola kan na verloop van tijd verslechteren en dit valt niet onder de garantie.

Uw pergola schoonmaken

- Gebruik geen schuursponsje, crèmereiniger, schuurspons, ijzerdraadbol of gekleurde doeken.
- Aanbevolen: zachte spons, zachte zandvrije doek, watten, katoen of vliespapier (alleen wit).
- Gebruik geen bijtende producten zoals zure of alkalische reinigingsmiddelen. Het wordt aanbevolen om te wassen met water met een neutraal pH-reinigingsmiddel en het vervolgens af te vegen met een doek om het droog te houden.
- Bij het reinigen met hogedrukapparatuur moeten dezelfde voorzorgsmaatregelen worden genomen als bij het reinigen van de carrosserie: afstand, type mondstuk, watertemperatuur en druk moeten allemaal in aanmerking worden genomen.

Gebruik Herinnering

- Controleer nadat de installatie is voltooid of de schroeven goed vastzitten. Vergeet niet om de schroeven minstens één keer per jaar te controleren.
- **In gevallen waarin sneeuwval, hagel of harde wind van meer dan 80 km/u wordt voorspeld, wordt aanbevolen de lamellen te openen. Bedien de messen niet bij vorst of sneeuw. Verwijder de bladen van de pergola als er veel sneeuw ligt.**
- Controleer regelmatig de afdichtingsomstandigheden om er zeker van te zijn dat de afdichtingen of andere componenten niet lekken.
- Ruim regelmatig vuil op, zoals gevallen bladeren op de pergola, om verstopping van de afvoer te voorkomen.
- Gebruiksbeperkingen: Waterdichte systemen zijn, hoewel effectief, niet ontworpen om volledige waterdichtheid te garanderen. Zware regen en harde wind kunnen de pergola beschadigen. Eventuele opgelopen schade wordt niet gedekt door de garantie.

BRUKERMANUAL

OTHER LANGUAGES

Pergola 5.6 x 4 m

Les denne bruksanvisningen før du bruker pergolaen din for første gang.
Ta vare på denne håndboken for fremtidig referanse.

Deluxe Pergola

Åpning: Elektrisk

Størrelse: 569,6(Lengde) x 409(Bredde) -cm

Installasjonsmerknader:

1. Installasjon krever minimum tre personer: en for måling og merking, en for montering og en som assistent.
2. Kun betonggulvfester leveres. I tilfelle det ikke er betongplate på bakken, anbefales det å lage betongplater ved hver søyle. Betongplaten bør være minimum 500x500x500mm.
3. Etter at Pergola-rammen er montert, bruk en firkant, vater og linjal for å måle produktets nivå og diagonal for å sikre størrelsen på pergolaen. Basene må være nøyaktig jevne uten toleranse.
4. Pergolaen må boltes til gulvet. Vi tar ingen ansvar dersom fliser er sprukket under boring av boltene.
5. Elektroverktøy er nødvendig: sørg for at de fungerer som de skal og følg sikkerhetsinstruksjonene.
6. Vær forsiktig når du bruker skarpe verktøy.
7. Bruk verneklær inkludert vernebriller, hjelmer og hansker.
8. Ikke klatre eller stå på taket.

Sikkerhetsadvarsel

- Det anbefales sterkt å bruke hansker ved montering.
- Ikke installer pergola under dårlige værforhold, som vind eller regn.
- Ikke berør noen ledninger med aluminiumsprofiler.
- Bruk alltid vernesko og briller ved montering av pergola.
- Oppbevar alle plastposer utilgjengelig for barn.
- Pergolasøylen må plasseres og festes på en flat overflate.
- Ikke len deg på søylen under monteringsfasen.
- Ikke la barn nærme seg åstedet under monteringsfasen.
- Ikke vær i nærheten av pergola i storm eller tyfon.
- Ikke prøv å klatre pergola under påvirkning av alkohol eller narkotika.
- Når du bruker stiger eller lignende verktøy og elektroverktøy under monteringsfasen, sørg for å følge produsentens sikkerhetsanbefalinger.
- Varmt verktøy, for eksempel en elektrisk drill, kan ikke være i kontakt med pergolaprofilen.
- Pass på at det ikke er noen kabler eller andre kabler skjult under jorden før du plasserer søylen.

Generelle råd

- Denne pergolaen har flere komponenter og den tar minst 90 minutter å montere. Pergolaen bør ikke plasseres under et tre.
- Hvis du kobler søylen direkte til sement eller lignende base, bruk de forhåndsstansede hullene på den medfølgende basen.
- Sjekk antall profiler og beslag før montering og bruk dem i henhold til listen over profilbeslag for enkel montering.
- Legg små biter som skruer i en beholder for å unngå tap.
- Vær oppmerksom på posisjonen til transmisjonen på bjelken for å unngå feilplassering.
- Rengjør regelmessig løv, snø eller andre gjenstander fra pergolaen.

Vedlikehold og reparasjon

- For å rengjøre pergola, bruk et mildt rengjøringsmiddel og skyll med vann. Ikke bruk aceton eller skurende rengjøringsmidler for å rengjøre overflaten på aluminiumsprofilen.

Beskyttelse og installasjonsverktøy

Verneutstyr:

1. Hjelm
2. Hansker
3. Førstehjelpsskrin
4. Vernebriller

Måleinstrument:

1. Målebånd (5 meter eller mer)
2. Firkantet linjal
3. Nivå

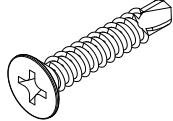

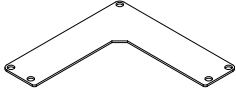

Verktøy:

1. 2 meter stige (1,5 meter eller mer)
2. 13 mm sekskantnøkkel
3. 17 mm sekskantnøkkel
4. Elektrisk drill
5. Elektrisk bor (10 mm bor)
6. Tusch eller blyant
7. Gummihammer
8. Tetningsmasse og limpistol

1

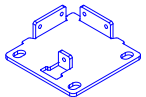

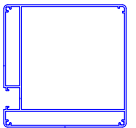

x 1

Installere stasjonsventilblader

1) Festet endelokket for motorkoblingsventilen ① på motorens tilkoblingsventil C-1 med 4,2*20 selvskjærende skrue .

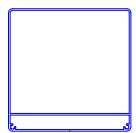

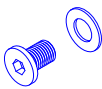

Hvis installasjonsstedet er trangt, kan bladdekslene monteres etter at rammeverket er installert.

③		x 4	A-1 A-2 A-4 A-5		x 4
④		x 20			

Sett sammen rammeverket

1) Juster hullene i bunnplaten som vist ③ med hullene i stolpene og lås bunnplaten ③ til stolpene med M8*12 sekskantskruer (med skive) ④.

③		x 2	A-3		x 2
④		x 10	A-6		

Sett sammen rammeverket

2) Juster hullene i bunnplaten som vist ③ med hullene i stolpene og lås bunnplaten ③ til stolpene med M8*12 sekskantskruer (med skive) ④.

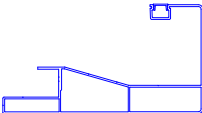

B-1 B-4		x 2
⑤		x 8
⑥		x 8

Sett sammen rammeverket

3) Som vist, sett inn bjelke og takrenne (med akselholder) + motor (B-1, B-4) inn i innleggene, så fikset B-1 og B-4 på stolpene med M8*25 sekskantskruer ⑤ og M8*35 sekskantskruer ⑥.

B-2	B-3		x 4
B-5	B-6		

Sett sammen rammeverket

4) Som vist, sett inn bjelken og takrennen (B-2, B-3, B-5, B-6) inn i innleggene, festet deretter bjelke & takrenne på stolpene med M8*25 sekskantskruer^⑤ og M8*35 sekskantskruer^⑥.

⑤		x 12
⑥		x 12

7

x 20

Fest Pergola til bakken

- 1) Bruk 20 M8*80 ankerbolt ⑦ forutsatt, hvis bakken er betonggulv. Hvis ikke må du finne en annen løsning for å feste pergolaen din på ønsket overflate.
- 2) Flytt pergolaen til riktig installasjonsposisjon, merk deretter plasseringen av de fire stolpene med blyanten, fjern pergolaen og bruk den elektriske drillen til å lage 20 hull i henhold til merket. Flytt pergolaen tilbake til posisjonen og fest basen plate med M8*80 Ankerbolt ⑦.

Merk: ⑦ x 4
Før du fester bunnplaten, er det nødvendig å sikre at diagonalene til de 6 stolpene er like lange.

Det er brukerens ansvar å sørge for at pergolaen er festet nede. Produsenten er ikke ansvarlig for skader forårsaket av naturkatastrofer eller spesielle hendelser på pergolaen (eller dens tilbehør). Enhver pergola som ikke er fikset kan sprenge og forårsake skade, og dette ansvaret vil ikke tilskrives produsenten. Sjekk pergolaen regelmessig for å sikre at den forblir stabil og godt festet til bakken. En pergola som løsner fra sin posisjon og pådrar seg eller forårsaker skade vil ikke dekkes av garantien.

Ikke tilgjengelig

Øk den vanntette ytelsen til Pergola

1) Selve pergolaproduktet er vanntett, så produsenten gir ikke tetningsmasse. Forsegling kan gjøres etter eiers skjønn for å øke pergolaenes holdbarhet.

Tetningsposisjon: innsiden av profilfugen, skjøten mellom takrennene (som vist).

B-7**x 1****8****x 4**

Sett sammen rammeverket

4) Som vist, fikser bjelken og takrennen B-7 på rammeverket med M8*20 sekskantskruer⁸.

Merk:

Vær oppmerksom på monteringsretningen til bjelken og takrennen B-7.

Trinn 1

Steg 2

— Strømledning

Installere Wire

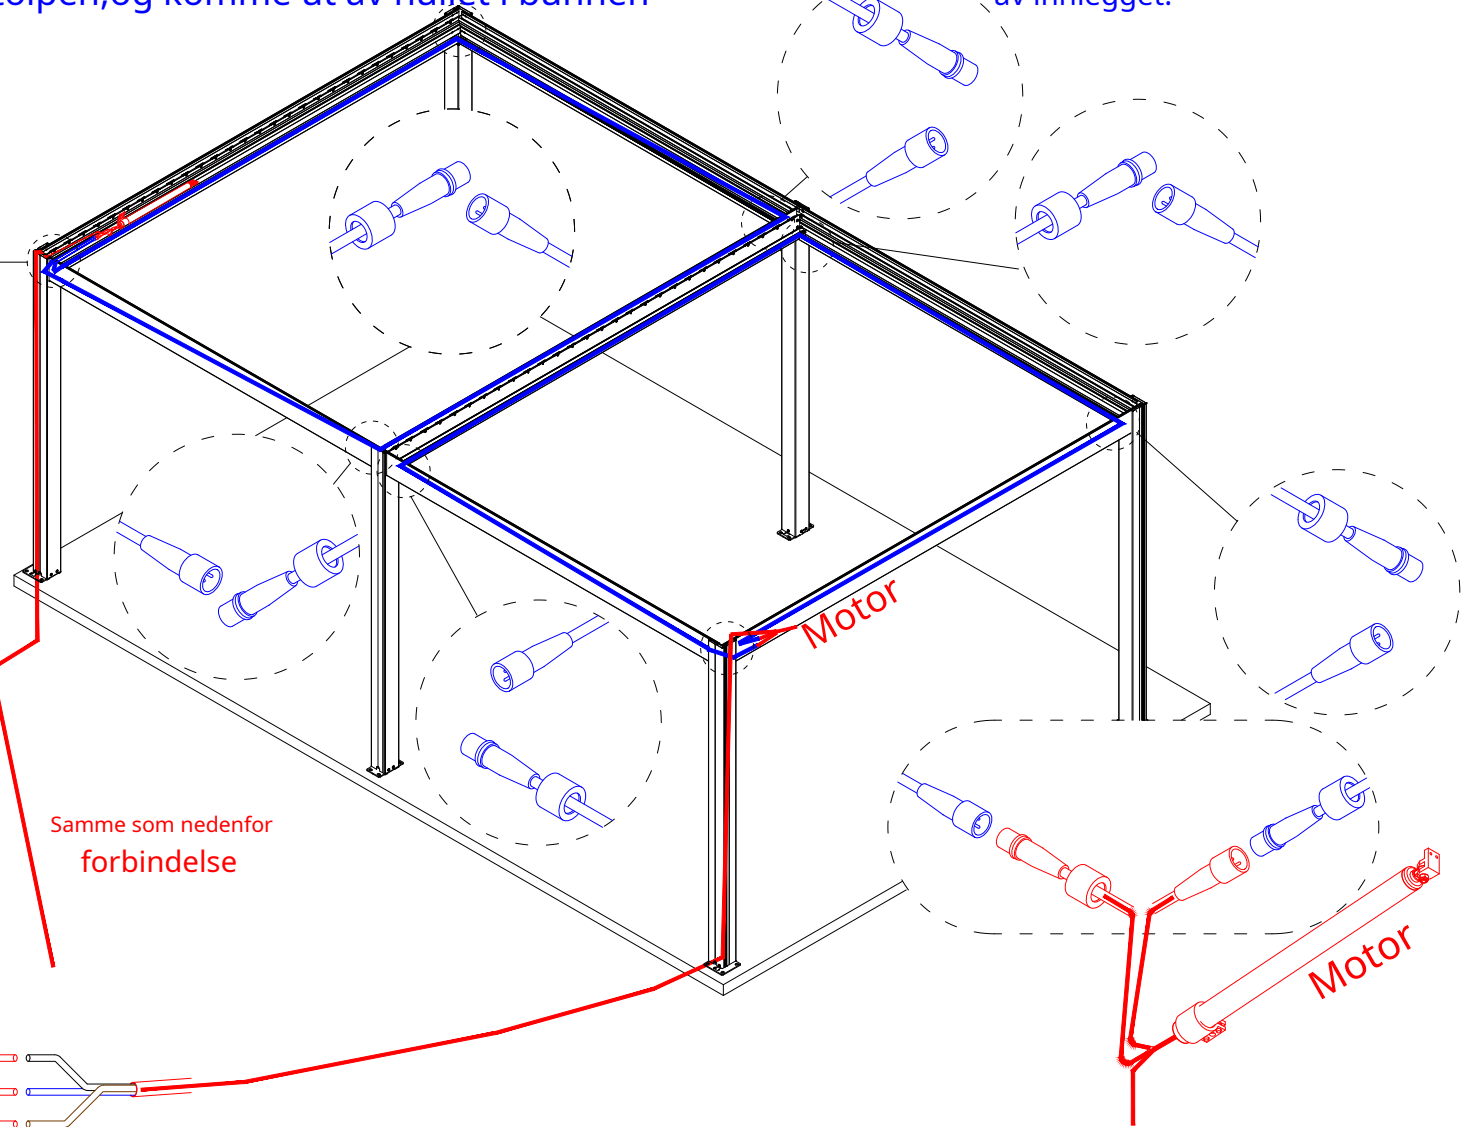

For å legge ut motorkabelen, hvis ledningen må skjules inne i stolpen, kan du først trekke ledningen til bunnen av bjelken, deretter fra gapet mellom bjelken og stolpen til den øvre enden av stolpen, og til slutt gå inn i stolpen fra hakket i den øvre enden av stolpen, og komme ut av hullet i bunnen av innlegget.

Lokalt støpsel og stikkontakt 1. Ikke plasser i nærheten av vann
2. Plugg: 10A, 110 - 240V

Samme som nedenfor forbindelse

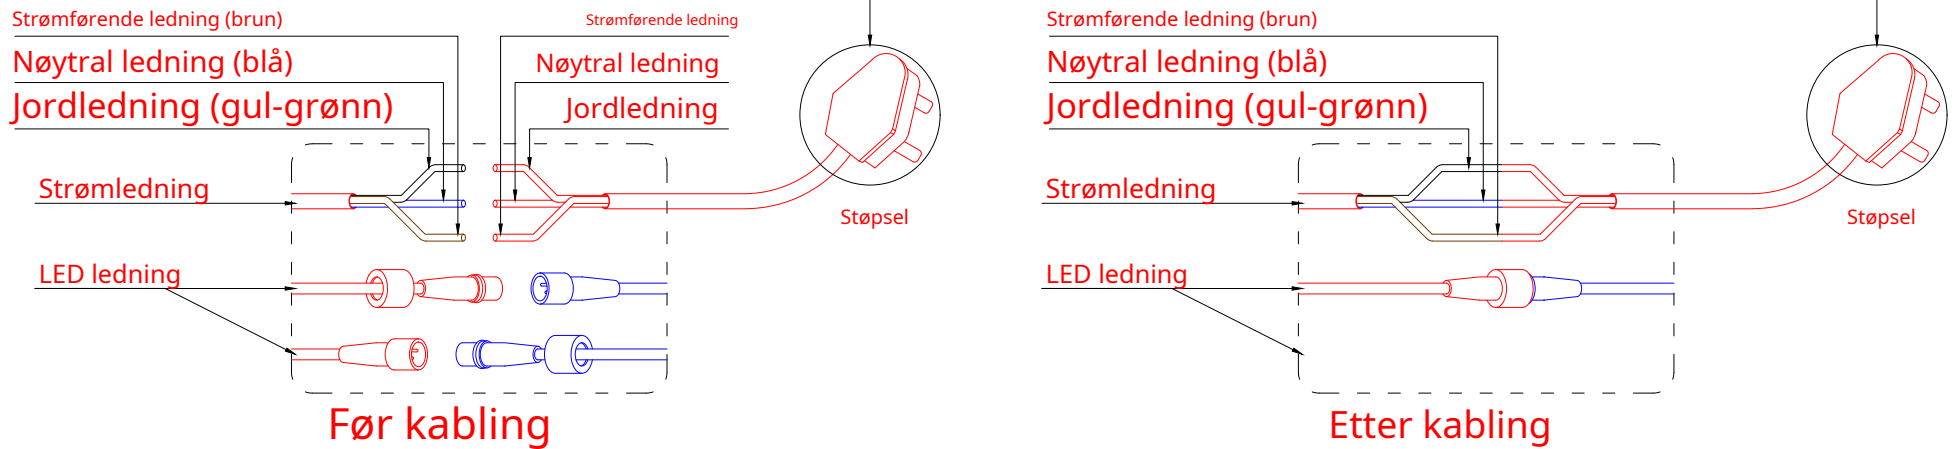

Merk: Følg trinnene for å koble ledningen riktig, ellers vil motoren være defekt.

Støpset følger ikke med

9		x 4
10		x 4

Fest stolpe- og bjelkehjørneforlengelsesstykket

1) Som vist, skyv forlengelsesstykket for stolpehjørnet inn i det øvre av stolpehjørnet. Skyv så bjelkehjørneforlengelsesstykket inn på siden av bjelkehjørnet.

Trinn 1

Steg 2

Trinn 3

E**x 4**

Fest T-spordekslet

2) Som vist, sett inn T-spordekslet E inn i sporet på stolpen.

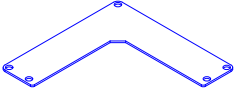

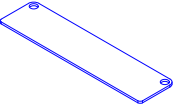

Bunnen av dette T-spordekslet må kuttes med 10 mm kortere på stedet for å unngå å holde seg i veien for kablene som kommer ut.

Trinn 1

Steg 2

⑪		x 4
⑬		x 16
⑭		x 8
⑮		x 2

Fest stolpens toppdeksel

3) Som vist, sett på den L-formede endeplaten ⑪ på toppen av stolpen og fest den deretter med 3 av 4,2*16 selvskruende skruer ⑬ og 2 av 4,2*19 bor-hale skruer ⑭. Festet rektangelstolpens toppdekslet ⑮ på stolpene med 4,2*16 flathodeskrue ⑬.

Stramme

C-1
C-2 x 2

Montering av lamellblader

- 1) Som vist klikker lamellbladet med drevet C-1 direkte inn i sporet.
- 2) Koble motorarmbraketten til endelokket på lamellbladet med drevet C-1 og C-2.

9rillen

Trinn 1

Steg 2

Skrue av

x112

Montering av lamellblader

4) Som vist, fikser axelholderen¹⁵ på axelholdermed M5*16
Forsenkede skruer¹⁶.

C-4		x 27			x 56
					x112

Montering av lamellblader
 5) Som vist klikker lamellbladet C-4 direkte inn i spor, festet akselholderen gland¹⁵ på akselholder med M5*16 Forsenkede skruer¹⁶.

Merk:
 Hver gang et lamellblad er installert, skal akselholderen kjertel¹⁵ i begge ender av lamellbladet er festet.

D**x 2**

Montering av lamellblader

6) Som vist, bruk M5*8 håndstrammet limhodeskrue¹⁷ gjennom hullet (på kontrollstangen D), deretter festet på lamellbladet.**17****x 56**

Trinn 1

Steg 2

②

x 4

②

x 2

Montering av bunnplatedekselet

1) Som vist skal det U-formede hakket på bunnplatedekselet være orientert i samme retning som avløpsåpningen. Bunnplatedeksel på stolpe med ekstra utløpsspor.

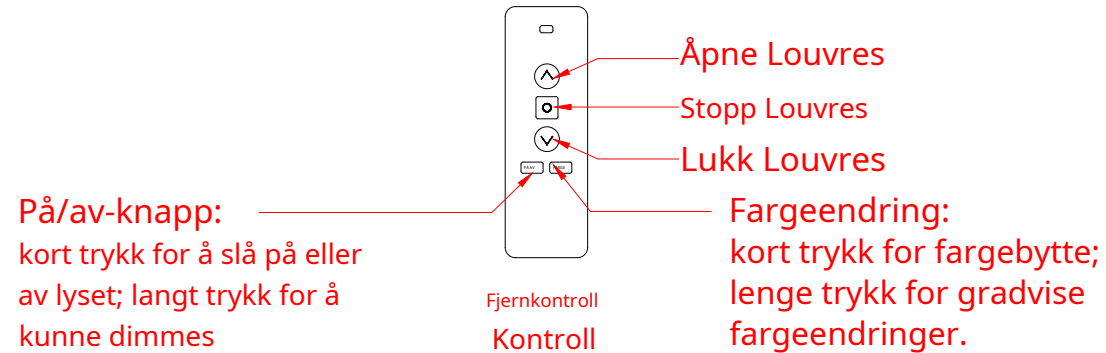

Trinn 1

Steg 2

Når fjernkontrollen og mottakeren ikke kan kontrollere motoren, følg trinnene nedenfor for å omprogrammere.

Trinn for sammenkobling:

①

Slå av strømmen i 15 sekunder og koble deretter til strømmen igjen start følgende trinn innen 30 sekunder.

②

Åpne bakdekselet på fjernkontrollen/mottakeren, trykk og hold inne **U2-knapp**i mer enn 7 sekunder.

③

Når motoren fortsetter å lage en "**beepbeepbeep**" lyd.

④

Trykk og hold inne **stoppknapp** på fjernkontrollen/mottakeren i mer enn 2 sekunder igjen. Når "**beepbeepbeep**" lyden fra motoren forsvinner, betyr det at fjernkontrollen/mottakeren har blitt paret vellykket.

Trinn for å endre retning:

Slå av strømmen i 15 sekunder og koble deretter til igjen kraften altså vennligst start følgende trinn innenfor 30 sekunder.

Åpne bakdekelet på fjernkontrollen/ mottakeren, trykk og hold inne **U2-knapp** i mer enn 7 sekunder.

Når motoren fortsetter å lage en "**beepbeepbeep**" lyd.

Trykk og hold inne **oppknappen** på fjernkontrollen i mer enn 2 sekunder.

Motoren gjør en "**beepbeepbeep**" lyd igjen

Trykk og hold inne **oppknappen** av fjernkontroll/ mottaker for mer enn 2 sekunder.

Parings Slettingstrinn:

Slå av strømmen i 15 sekunder og koble deretter til igjen kraften altså vennligst start følgende trinn innenfor 30 sekunder.

Åpne bakdekelet på fjernkontrollen/ mottakeren, trykk og hold inne **U2-knapp** i mer enn 7 sekunder.

Når motoren fortsetter å lage en "**beepbeepbeep**" lyd.

Trykk og hold inne **oppknappen** av fjernkontrollen/ mottakeren for mer enn 2 sekunder. Slett sammenkoblingen vellykket.

Motoren gjør en "**beepbeepbeep**" lyd igjen

Trykk og hold inne **stoppknapp** av fjernkontrollen/ mottakeren for mer enn 2 sekunder.

Ta vare på pergolaen din

Strukturoverflater belagt med termoherdende pulverlakker må rengjøres en gang i året for å opprettholde sitt opprinnelige estetiske utseende.

Termoherdende pulver er følsomme for:

- Fysisk friksjon, hard støt, ekstrudering, kjemikalier inkludert alkalisk løsemiddel og surt løsemiddel.
- Naturlige elementer som vind, regn, snø og langvarig sollys. Utsiden av pergolaen kan forringes over tid og dette vil ikke dekkes av garantien.

Rengjøring av pergolaen din

- Ikke bruk skuresvamp, kremrens, skuresvamp, jerntrådkuler eller fargede kluter.
- Anbefalt: Myk svamp, myk sandfri klut, bomullsull, bomull eller ikke-vevd papir (kun hvitt).
- Ikke bruk etsende produkter som sure eller alkaliske rengjøringsmidler. Det anbefales å vaske med nøytralt pH vaskemiddel og deretter tørke av det med en klut for å holde det tørt.
- Ved rengjøring med høytrykksutstyr må de samme forholdsreglene tas som ved rengjøring av karosseriet: avstand, dysetype, vanntemperatur og trykk bør alle vurderes.

Bruk påminnelse

- Etter at installasjonen er fullført, kontroller at skruene er stramme. Husk å sjekke skruene minst en gang i året.
- **I tilfeller der det er spådd snøfall, hagl eller sterk vind over 80 km/t, anbefales det å åpne lamellbladene. Ikke bruk knivene i tilfelle frost eller snø. Vennligst fjern bladene fra pergolaen når snøen er rikelig.**
- Kontroller tetningsforholdene regelmessig for å sikre at tetningene eller andre komponenter ikke lekker.
- Rydd regelmessig opp rusk som fallne løv på pergola for å forhindre blokkering av avløpet.
- Bruksbegrensninger: Vanntette systemer er, selv om de er effektive, ikke designet for å sikre fullstendig vanntetting. Kraftig regn og sterk vind kan skade pergolaen. Eventuelle skader dekkes ikke av garantien.
